

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. FIFTH BIENNIAL REPORT

OF THE

Board of Prison Commissioners,

1902 ~ 1904.

To His Excellency, James B. Frazier, Governor, and the Fifty-fourth General Assembly of Tennessee:

We herewith respectfully submit for your consideration the fifth biennial report of the operations of the Tennessee State Penitentiary for the period beginning December 1, 1902, and ending December 1, 1904. On December 1, 1902, the number of inmates enrolled at the Main Prison at Nashville and at the Branch Prison at Brushy Mountain was 1,685. On December 1, 1904, at both prisons there were 1,680.

The tables of the Warden published herein show as follows: On December 1, 1902, number of inmates at Main Prison, 923; at Brushy Mountain, 762; total, 1,685. On December 1, 1904, number of inmates at Main Prison, 944; at Brushy Mountain, 736; total, 1,680.

Received from December 1, 1902, to December 1, 1904, at Main Prison, 960; at Brushy Mountain, 346; total, 1,306. Escaped from Main Prison, 8; from Brushy Mountain, 27; total, 35. Recaptured from December 1, 1902, to December 1, 1904, at Main Prison, 12; at Brushy Mountain, 13; total, 25.

Number discharged from Main Prison from December 1, 1902, to December 1, 1904, 581; from Brushy Mountain, 483; total, 1,064. Died at Main Prison during this period, 70; at Brushy Mountain, 53; total 123. Pardoned during this period, at Main Prison, 81; at Brushy Mountain, 33; total 114.

On December 1, 1902, number of United States prisoners on hand was 142; on December 1, 1904, the number is 41. On De-

cember 1, 1902, the number of white male prisoners, State, at Main Prison, was 301; United States, 100; total, 401. Colored male prisoners, State, 430; United States, 42; total 472. White female prisoners, State, 7; colored, 43; total 50; making number at Main Prison, 923. White male prisoners at Brushy Mountain December 1, 1902, 145; colored, 617; total, 762. On December 1, 1904, the white male prisoners, State, at Main Prison, were 342; United States, 22; total, 364; colored male prisoners, State, 505; United States, 18; total 523; white female prisoners, State, 3; colored, 53; United States, colored; 1; total, 57. White male prisoners at Brushy Mountain, 159; colored 577; total, 736.

OPERATIONS AT MAIN PRISON.

Carrying out the contracts entered into between the Board of Prison Commissioners and the parties herein below mentioned has given employment to most all of the prisoners confined at Main Prison since December 1, 1902. Duncan & Co., and the others of said contractors are engaged in the manufacturing business, which is conducted in buildings belonging to the State located within the Prison walls.

The said contracts in operation on December 1, 1902, were with the following parties: Duncan & Co., operating a foundry and making castings, 99 men; Leo Kauffman, operating a dyeing and finishing establishment in which hosiery is prepared for market, 99 men; Jacob May, operating a hosiery mill making and producing stockings, etc., 99 men; I. Wingard, operating a paper box factory, 10 men with the privilege of 99; W. M. Goodbar, manufacturing shoes, 99 men; H. C. Yerkes, operating a plant to manufacture shoe findings, 99 men; Geo. W. Fall, operating a harness factory, 50 men with a privilege of 49 more.

The contracts under which these various contractors operated from December 1, 1902, to March 1, 1903, were made in 1897. On March 1, 1903, said contractors, except G. W. Fall, and in his place the Tennessee Harness Co., with the Board of Prison Commissioners entered into new contracts for three years with the privilege of renewal at the option of said firms an additional three years. The contracts entered into in 1903 and under which said operations are now carried on, are more advantageous to the

State than the former contracts of 1897. These last contracts provide for payment of rents for the buildings and for power and water furnished by the State, while such was not the case under the former contracts. So far there has been but little disagreement between the Board of Prison Commissioners and said contractors when monthly settlements are made under said contracts for labor, rent, power and water. When such has occurred it has been readily adjusted.

In the manufacturing shops above referred to there were 695 prisoners employed on December 1, 1904. All prisoners so employed are fed, clothed, disciplined and controlled by the Prison authorities. The contractors pay a stipulated price per day for the labor of each prisoner—a day's work estimated at ten hours the year round.

On December 1, 1904, thirty inmates were employed in the State shop, in which are manufactured all of the clothing worn by the prisoners confined at both the Main Prison and Brushy Mountain. Shoes, hosiery and rag carpets are made in this shop. Shoe repairing department is also maintained in this shop.

On December 1, 1904, twenty-two men were employed on the State farm. At the same time twenty-two men were employed at the brick yard operated by the Board of Prison Commissioners.

On December 1, 1904, in miscellaneous employment there were 115 men. In this number are included the inmates at work in the power house, at the pump stations and under the direction of the engineer, at the laundry, in the wings, in the hospital, on the yard force, those at work in the administration building, on the lawn and at the hothouse.

SANITARY CONDITION OF THE PRISON AND HEALTH OF THE INMATES.

The greatest care has been taken by the Board of Prison Commissioners to bring about as near as possible a perfect sanitary condition. The cell department is thoroughly disinfected at least twice a week and oftener if thought necessary. The yards and shops are kept clean of all trash or filth. All trash is hauled out of the prison yard and burned.

As to the health of the inmates reference is made to the report of Dr. Frank Head, the Prison Physician.

FIRE LOSSES.

On August 19, 1904, at about 1:30 o'clock in the morning, fire broke out in the laundry and bakery. The fire alarm being given was promptly responded to by the fire brigade. Under the direction of A. G. Murphy, night engineer, this fire brigade, which is composed of convicts, performed most efficient service and succeeded in extinguishing the fire before the building was destroyed. The loss sustained amounted to \$1,558.41. On the property destroyed, to the amount of \$876.27 insurance was held. The insurance companies promptly paid said sum of \$876.27. To repair the building, laundry and bakery sufficiently for use less than the insurance money paid has been used. The laundry machinery was damaged by the fire, and is not since repaired as good as before the fire, yet for some time can be made to do the work required.

FIRE INSURANCE.

No additional insurance has been taken out during this biennial term. There is only \$7,500 of insurance in force on the buildings and improvements within the Prison walls. The insurance rate on this property being \$4 on \$100, was so high, and the last Legislature having failed, though the matter was up before it, by resolution or otherwise to instruct in regard to further insurance, the Board of Prison Commissioners took out no additional insurance. The Board has had under consideration the installation of an automatic sprinkler system in the four main buildings rented by the manufacturing firms and the one in which the power plant is located. If this is installed it will be at a cost of from \$15,000 to \$20,000. The price of such a system alone has deterred the establishment of the same.

At present three night watchmen, one employed by the State and two by said manufacturing firms, and the convict fire brigade is the protection against loss by fire. To enable us to more efficiently extinguish any fires that might occur, in 1903 we purchased 500 feet more of hose.

BETTERMENTS.

During the past two years there has been erected a brick smokestack for use at the power house. The old stack was con-

demned as dangerous, so was torn down. This new one cost \$5,345.60. It is well built and will no doubt last for years. We also erected a small brick building to be used as a morgue at a cost of about \$300.

An exhaust heating system was installed at a cost of \$3,768.62, the heating being done by exhaust steam, which before had been lost. By this system all the manufacturing plants are heated except the foundry.

There was expended \$1,650 in extending the water mains through the different manufacturing buildings so as to have water convenient in case of fire.

In 1903 \$5,200 was expended in the completion of the ice plant and cold storage.

In 1903 \$2,109 in labor of convicts was given in the erection of the addition to the foundry building. In 1903 \$1,920.75 was expended for additional machinery, including a Worthington pump for the power plant.

In 1903 we expended \$595 on the greenhouse, in which is grown all the flowers used in ornamenting the Capitol grounds and the Penitentiary lawn. Also in 1903 we had constructed a new gate for the main entrance to the Prison yard at a cost of \$358.93.

ESCAPE OF PRISONERS.

During the two years covered by this report only a few prisoners escaped. The number at the Main Prison is eight, at Brushy Mountain, twenty-seven. At the Main Prison of those who escaped six were trustees who worked outside of the prison walls and one who worked on farm, and one while in transit to the mines. Of those who escaped from Main Prison during this time five were recaptured.

THE GRADED SYSTEM.

This system was adopted a few months before December 1, 1902. During the past two years we have had a trial of it. We cannot speak too highly of the benefits of this system. Nothing introduced in the government of the inmates of the Penitentiary has been productive of so much good in their discipline and control as the enforcement of this system. It has not only been pro-

ductive of better conduct but better labor in the institution. The inmates take pride in attaining the upper grade. In the breast of every prisoner there is the hope of pardon. Each prisoner knows that if his conduct is such as entitles him to be in the upper grade, his papers filed for pardon would be more favorably considered than if his conduct placed him in the middle grade, and that if his conduct places him in the lower grade he knows that all applications for pardon would be refused by the Advisory Board of Pardons.

Under this system three grades are established. The upper, middle and lower. Each prisoner on first entering the Penitentiary is assigned to the middle grade.

ADVISORY BOARD OF PARDONS.

The Advisory Board of Pardons, from December 1, 1902, to December 1, 1904, reported upon 230 applications for pardon, which had been referred to it by the Governor.

ICE PLANT AND COLD STORAGE.

Crediting this plant with all the ice used for all purposes at Prison shows a profit for the year 1903 of \$1,072.82, and for the year 1904 of \$1,486.16. In the year of 1903 a contract was entered into between the Board of Prison Commissioners and J. C. Trabue & Co., the said firm in its contract having agreed to take ten and a half tons of ice per day for a period of twelve months, beginning April 1, 1903, to April 1, 1904, for which said firm was to pay at the rate of two dollars per ton. The said firm entered into a bond in the sum of \$5,000 to secure the performance of its part of said contract. The firm having failed, as the Board of Prison Commissioners considered, to carry out its part of the contract, suit has been brought and is now pending in Chancery Court at Nashville to recover the full amount of the bond. Whatever may be recovered in this suit will be an additional amount to be added to the profits above stated of said ice plant for said two years.

The cold storage has been of an inestimable benefit in keeping meats and vegetables pure and fresh for prison use. In fact, if none of the ice manufactured by said plant could be sold the op-

eration of said plant for the maintenance of said cold storage and furnishing ice for the use of the Prison would be indispensable.

FARM DEPARTMENT.

In the year 1903 the State farm and 260 acres of the Cockrill farm rented by the State, were cultivated under the management of Commissioner W. A. Carter.

During the year 1903, 105,337 pounds of beef, 5,123 pounds of pork, 1,188 barrels of Irish potatoes, 162 barrels of sweet potatoes, 701 barrels of onions, 37,439 pounds of cabbage, 701 bushels of tomatoes, 1,729 pounds of mutton, 554 gallons of sorghum, and a large amount of garden vegetables were raised and furnished the Prison. They were kept fresh and pure in cold storage till used.

The State discontinued to furnish corn to be ground into meal the latter part of 1902, it being found that meal could be purchased for less than the State could furnish corn and grind it.

A great deal of the cabbage was made into kraut, which was fed to the prisoners.

The cash sales of the farm products for the year amounted to \$4,933.19, and was turned into the treasury. The results of the operations of the farm for 1903 show a loss of \$8,485.55. This loss can be accounted for very largely from the fact that the drought cut off the corn, potatoes, hay and onion crop; that about 250 acres was in wheat, which was almost a total failure; that throughout the State there was a failure in the wheat crop.

For the year 1904 the farming department was under the supervision and management of Commissioner Hartford. The State farm and seventy-nine acres of the Cockrill farm were cultivated. The products of the farming operations for the year were 38,995 pounds of beef, 1,793 pounds of pork, 4,923 gallons sweet milk, 16,000 gallons of buttermilk, 1,290 pounds butter, forty-five barrels green onions, 850 barrels dry onions, 1,080 barrels Irish potatoes, 130 barrels sweet potatoes, 1,925 bushels of tomatoes, 1,628 dozen of green corn, 2,400 gallons sorghum, 316 barrels cabbage, besides enough more of cabbage to make ninety-five large barrels of kraut, about 2,500 bushels of wheat, about 2,700 bushels of oats and a large amount of garden vegetables. In addition to these, by reference to the farm inventory, will be

seen that an abundant supply of corn, hay, ensilage, etc., was produced for our consumption during next year. Of the tomatoes raised 6,000 gallons were canned, which will be sufficient to supply both Main and Brushy Mountain Prisons for twelve months.

During the summer of 1904 a large and well built shed was constructed on the farm to be used in storing all farming implements and machinery. This building and repairing of barns was done at a cost of \$651.41.

In the spring of 1904 cows were bought and a dairy conducted on the farm. Since then all the milk and butter used at the Prison have been furnished from the farm, and more than \$1,000 worth of butter and milk have been sold.

In February, 1904, eighty-five acres of the farm were seeded in grass. A good stand was obtained from which can be cut a crop of hay in 1905.

The cash sales from the farm products for the year amounted to \$7,476.66, which has been paid into the treasury. The profits for the year amounted to \$3,599.69.

BRUSHY MOUNTAIN MINES.

The report of H. B. Graves, Assistant General Manager, and Wm. B. Crawford, Superintendent of Brushy Mountain Mines, submitted as the report of W. T. Murray, Commissioner in charge of the mines, is hereto attached and made a part of this report. The same is so full and complete in every detail of the business that we take pleasure in adopting it as a comprehensive and exhaustive report of the affairs of that institution for the past two years. It will not be expected that within a reasonable limit of a report of this character that every detail can be covered without making a volume so large that it would be worthless. We do not claim for this report that it covers all of the detail work of the institution, but in submitting the same we do desire to state that it substantially shows the general results of the business and the accurate condition of the plant. It will be seen from this report that during the past two years the mines have made a net profit of \$337,539.10; as against a net profit for the biennial term ending November 30, 1902, of \$284,281.36; against a net profit for the term ending November 30, 1900, of \$260,043.01, showing

an excess of profits for this biennial term over the biennial term ending November 30, 1902, of \$53,257.74, and over the biennial term ending November 30, 1900, of \$77,496.09.

It will be seen that the year 1903, that the cash receipts were \$343,960.13, net amount of vouchers issued, \$178,122.77. Excess cash receipts turned into the treasury over vouchers issued, \$165,837.36. Total cash receipts for the year 1904, \$310,487.52, net amount of vouchers issued, \$162,885.89. Cash receipts turned into the treasury over vouchers issued, \$147,601.63, making a total for the two years of \$313,438.99, against \$204,926.54 for the term ending November 30, 1902, and against \$197,589.03 for the term ending November 30, 1900. In other words, for this term, 1904, we turned into the State treasury \$108,512.45, more net cash than we did for the biennial term ending November 30, 1902, and for this term we turned into the State treasury in net cash \$115,849.96 in excess of the net cash turned into the treasury for the term ending November 30, 1900, showing that the term ending November 30, 1904, we paid into the State treasury \$108,512.45 more than has been turned in for any other biennial term within the history of this institution.

PERMANENT IMPROVEMENTS.

The tabulated statement showing the increase and decrease in permanent accounts shows that during the year 1903 \$23,969.75 was added to the permanent account of the institution in actual value, and that during the year 1904 \$120.36 was added to the permanent account over and above the depreciation. These amounts were added to the actual value of the plant and enter into the profit account in addition to the net cash turned into the Treasury. The purpose of these statements is to show in detail these additions to the permanent account or increased value of the plant, and in a very comprehensive way account for such permanent improvements that have been charged to betterments, but really do not show all improvements placed upon the property, since many improvements have been made that were charged to other and different accounts and constitute a part of the expense of the institution, which properly might have been charged to betterment account. For instance, during this term we have entirely changed our electric haulage system. It will be noted

that in the last biennial report our electrician at the mines, in a report made by him, strongly recommended that we abandon the old third rail locomotive and adopt traction locomotives in their stead, for many very potent reasons mentioned by him in that report, which we need not mention here. We determined to make this change, and did so by swapping the old grip or third rail locomotives for traction locomotives, at a cost of several thousand dollars, but, since this was an addition to our electric plant, this expenditure was charged to the cost of operation and appears in our books as an expense rather than an improvement, and our profits thereby lessened on account of this expense. There are many other items of like repairs that might properly have been charged to betterment account, but was rather charged to expense in pursuant to our policy, which is to charge nothing to improvements or betterments account, except absolutely new additions to the plant; no improvements to an old structure, old mine or old pieces of machinery being charged to betterments, but all such expenditures are charged to expense account, thus obviating the necessity of charging off larger amounts for depreciation.

THE MINES.

From the report of the officers of the Brushy Mountain Mines it will appear that during the term just closed Mr. V. R. Evans, our Superintendent, resigned near the close of the biennial term, and Mr. Will B. Crawford was employed to fill his place. On account of this change and Mr. Crawford's want of familiarity with the operation of the different mines during the year 1903, it was deemed advisable to embody in the report of the institution Mr. Evans' report made at the close of the year 1903 in full, and allow Mr. Crawford's report to cover only the year 1904. It will, therefore, be seen that with reference to the condition of the mines and the work of preserving and improving them appears separately for each year.

MINE NO. I.

It will be seen from this report that in Mine No. 1 we made the change heretofore referred to in the electric haulage. We will not undertake to mention in detail every point of advantage gained by this change, since these details are fully covered by the

reports of the superintendents. But we do desire to state that by this change we find that we have greatly benefitted the condition of the plant. With the old grip locomotives we lost much time on account of their inefficiency. They would get out of repair, and it was frequently the case that all of the locomotives were out of repair at the same time; and much time was lost in the operation of the mines thereby, besides it cost several hundred dollars per year for each of these locomotives to keep them in repair; besides it kept one machine shop with a large force constantly at work to keep them going. With the new traction locomotives we have never lost a moment's time on account of inefficiency of the locomotives, but have been able to handle the output, without regard to its size, with perfect ease and without a dollar's expense added on account of inefficiency. While the change from the grip or third rail locomotive to the traction locomotive cost us several thousand dollars in money, the ultimate result of the change was a saving in expense, in that the old third rail that was absolutely necessary to the operation of the grip locomotives, was worn out and would have to be replaced. To have replaced this, so as to continue the use of the grip locomotives, would have cost several thousand dollars. The parties who sold the State these locomotives represented them to be efficient and economical in use. These representations proved to be untrue and the State was really entitled to be reimbursed by the builders of these machines on account of this failure. These people were the manufacturers of practically all of the supplies for the locomotives, many of which could not be purchased from any one else. We had been purchasing supplies for the locomotives for a long while from these people until they had an account of something like \$3,000 against us. If we had continued the use of the old locomotives we would have been compelled to continue buying supplies from them. We were refusing to pay this old account, demanding that they make good their representations with reference to the locomotives, and for this reason they had refused to furnish other supplies until the account was paid, so it will be seen that to have continued the use of the grip locomotives would have compelled us to have paid said claim, unjust as it was, in order to keep them going. When we abandoned the use of the grip locomotives and installed the traction loco-

tives it enabled us to say to the manufacturers that they must make good their representation with reference to the efficiency of these locomotives before we would pay their claim for supplies. The old third rail taken up out of the mines was sold as scrap for several hundred dollars. When we add these amounts together we have a sum equal to the cash outlay in making the change; hence our statement that we made a saving equal to the expense of the change. In other words, we would have had to paid out more money to continued the operation of the old third rail locomotives than the cost of the change. Besides the saving of several hundred dollars in the cost of repairs and the difference in the efficiency of the two methods of the haulage has greatly improved our condition.

It will be seen from the reports of the superintendents that advanced work in Mine No. 1 has about stopped on the lefthand side of the mine, all of the entries except 19 and 20 having been practically driven to the property line, and in most of the entries all of the rooms worked out; that 19 and 20 are in very small coal, and lack but little of being driven to the property line, these being the only entries that we can reasonably count as live entries in the mine. On the righthand side of the mine the entries are all in a squeeze, or in coal so dirty and filthy that it cannot be profitably worked. With the exception of one entry which is being driven as a prospect entry, through the squeeze, there is no advanced work on the right. It is hoped that this prospect entry will eventually. go through the squeeze and into profitable territory. But there is nothing in the outcrop on the far side of the mountain, to which point this entry is being driven, to warrant us in concluding that a profitable territory will be found. However, the cost of driving this prospect entry, when compared with the immense territory involved, we deem it advisable to continue the driving of this entry for at least two or three thousand feet, to the end that if a good coal deposit does exist beyond the squeeze it may not be lost.

From this statement it will be seen that unless this prospect entry results in the development of a profitable deposit of coal beyond the squeeze, the days of Mine No. 1 are numbered.

During the last two years we have succeeded in opening up a hallway through "Old 20 Left" and cut new hallways through

some old rooms that has enabled us to reach some coal that was left in the wrecked portion of the mine (pillars and stumps). This adds considerably to the life of the mine, and we are of the opinion that for the next two years a very fair output can be obtained from these pillars and stumps. But unless the Legislature should see fit to ratify the lease reported in our last biennial report as having been made with the Petros Land & Coal Co., or else we find a new and profitable deposit of coal by the prospective entry, we cannot expect this mine to continue to produce a steady output for a great while longer. It is likely that it will last for some four or five years, but within two years from this date the output will begin to grow less very rapidly, since there will be nothing left but to draw back the stumps in the worked out territory.

MINE NO. 3.

It will be seen that this mine was referred to in our last biennial report, and as there stated the territory sought to be developed by this mine was the only point at which a mine could be developed upon the State's property at a point where the present plant could be used. The coal shown on the opposite side of the mountain from the plant was very fine, and furnishes what we might call conclusive evidence that there was a large and profitable deposit of coal lying in the mountain in which the entries of this mine are to be driven. Yet, while this is true the outcrop in the side of the mountain next to the plant and near the work, were all poor and not inviting. When we begun to develop this mine we knew that No. 1 mine could not last a great while longer, and that it was absolutely necessary to have other mines developed that would furnish work for our men during the life of the plant. The development of this mine has proven a hard proposition. For a long while we continued to press the entries at a heavy cost, being in a squeeze almost the entire length of the entry, and while we have spent a large amount of time and money to develop the mine, we feel that we are now to the point where we see, in the immediate future, great prospects ahead for the mine. In all of the entries the coal is now showing magnificently, and the mine is producing profitable results. We are getting out an average of 200 tons a day from the mine and the output rapidly increasing, and the prospects are that it will continue to do so.

If we are not mistaken in our judgment as to the character of the deposit on the New River side of Frozenhead Mountain, this mine will last for many years, and will amply repay the State for the time and money spent in its development.

MINE NO. 4.

This mine was referred to in our last biennial report, from which it will be seen that the work of developing the same had just begun. During the term covered by this report we have completed the development of the mine at a cost of \$12,000, in addition to the money spent up to the date of our last biennial report. This additional cost was something like \$4,000 or \$5,000 in excess of what we thought the development would cost. This was caused by slides of some of the big fills on the incline that added materially to the expense of building the incline. We are now producing from this mine something like 120 tons a day. The mine is located in a long narrow strip of Frozenhead Mountain at a point convenient to the plant. At this point the mountain is very narrow and on this account the development is necessarily slow. The outcrop shows magnificently and we confidently expect No. 4 to prove a great mine. While it is true at the present time some of our entries are in small coal, yet we are satisfied that we are passing through a local squeeze that cannot continue long, and are not the least discouraged on account of the fact that the coal in these entries has run down lower than we would like.

While we confidently expect a continuous increase in the output of both No. 3 and No. 4, we do not believe that the increase in these mines will compensate for the decrease in the output of No. 1. To say the least of it, it would not be safe to risk the development of these mines to compensate for the loss in No. 1, since should they fail to do so the consequence would be great. We are, therefore, constrained to again call attention to the lease made by the Board of Prison Commissioners of 300 acres of land from the Petros Land & Coal Co., and will here repeat what was said in the last biennial report upon this subject:

"The Petros Land & Coal Company own a tract of land lying adjoining the State's property in close proximity to Mine No. 1, estimated to contain about 300 acres of coal, adjoining the most

productive part of said mine in the region of its most productive portion now being worked, it appearing that it will be but a short while until the part of this mine adjacent to this territory will be worked up to the line of this property and until the State will have exhausted that portion of the Brushy Mountain seam. Certain other parties, including one of the State's largest customers, a coal dealer in Atlanta, who has been handling the product of the State mine since it was first opened, and who is in touch with the people who used our product, were seeking to obtain a lease of this tract of land for the purpose of developing a mine and entering the market in competition with the State and with the same coal. We regarded competition of this sort as serious and especially from a party in touch with our trade. Hence we regarded it as vitally important for two reasons that the State obtain a lease of this property: First, to cause as long a life as possible to Mine No. 1, and enable us to market this coal with improvements already made in Mine No. 1; second, to prevent this serious competition from our largest customers who were in touch with people who were the largest consumers of Brushy Mountain coal. In view of these facts we closed a contract with said company for the lease of said property for such length of time as would enable the mining of the coal contained in the property at a royalty of six and one-quarter cents per ton, which is, as we understand, one-half of the usual royalty paid in the Coal Creek and Jellico section of the State. We believe this property will add four or five years life to Mine No. 1, and what will be paid in royalty will be saved in equipage and improvements."

We believe that such life can be added to Mine No. 1 by the ratification of this lease, and we are authorized by the lessors to state that they are willing that the lease be ratified. The entries from Mine No. 1 can be driven into this property and the coal mined out without adding expense of development, since the development of Mine No. 1 will serve to mine out this territory. Should Mine No. 3 and Mine No. 4 fail to increase in output sufficient to compensate for the decreased output in Mine No. 1, without this lease the State might, during one month, sustain a loss greater than the royalty that would be paid upon the coal mined out of this lease during an entire year. We can see no reason why the Legislature should fail to ratify the lease and are

thoroughly convinced that there is great danger that there will be a material reduction in the profits of this institution should the lease not be ratified. Mr. W. T. Murray, Commissioner in charge of the mines, is of the opinion that \$50,000 could have been added to the profits of the institution had this lease been ratified by the last Legislature.

CONDITION OF THE PLANT.

In the last four years extensive repairs, improvements and betterments have been placed upon this property, all of which have been paid for out of the earnings of the institution. Practically all of the buildings are in good repair and should not need any material repairs for years to come. During the past year several thousand dollars of improvements have been placed upon the prison buildings, guard's boarding house, kitchen and hospital. There are yet some improvements that should be made upon the prison during the next two years. The Commissioner in charge is of the opinion that something like \$2,000 could be spent to a great advantage upon the prison. Outside of this there is no considerable repairs of importance needed. The entire plant is in as near perfect condition as it is possible to have it. It therefore results that for sometime to come the expenditures upon this property will be light. However there is one thing that ought to always be kept in view, and that is a considerable amount of prospecting for coal ought to be done every year to the end that the Board of Prison Commissioners might always keep development enough ahead to absolutely insure constant employment for the allotted number of men to the Brushy Mountain Coal Mines.

It is dangerous to depend upon too little development, since if at any time you should find yourself confronted with a want of sufficient development to keep the men at work, you are liable to have materially reduced output and consequent reduction in receipts.

There are several other seams of coal in the mountain accessible to the present plant, that promises fine results. These seams should be prospected at once. It is, therefore, earnestly recommended that within the next two years an entry of at least one thousand feet in length be driven in what we call "the lower pioneer seam," which is about eighty feet below Mine No. 4. This

seam of coal was discovered after Mine No. 4 was opened up. It is a magnificent coal of the same variety as the Hickory Block, which is mined from No. 4 mine. This seam has been prospected at the outcrop in quite a number of places, where it shows up perfectly clean with four feet of coal. We are of the opinion that it is a better seam of coal than No. 4. It can be mined and delivered from the same tippie and incline as No. 4, and consequently the development of this seam will be comparatively inexpensive, and mining operations can be carried on at the same time they are being prosecuted in No. 4.

There is another seam known as the Joiner seam, which should also be prospected by the driving of an entry at least one thousand feet, which will develop the value of that seam. With these two seams of coal properly prospected, the Commission can always know what they have to depend upon for the future. During this administration we have developed two mines at heavy expense, and there has been no time for such extended prospecting in the other seams, but with these two mines in operation and not a dollar to be expended for development purposes, the next biennial term can easily afford to prospect at least these two seams of coal, and we cannot too strongly recommend that they both be prospected within the next two years.

During the biennial term we had a small fire, destroying two houses located on what is known as the Chandler property, one of them being the old Chandler storehouse, worth about \$300, and the other was an old log house of no value except for what old material was in it.

INSURANCE.

We beg to advise that for the last two years we have been wholly unable to secure any insurance upon the State's property at the mines, and we are now without insurance. However, in view of the recommendation of the former Legislative Investigating Committees, we feel that the State is able to carry its own insurance. On account of the inadequate water supply at the mines we have very little, if any, fire protection, and we see no way by which this can be materially improved during a portion of each year—the dry season. But a system of fire protection

might be inaugurated that would be reasonably efficient for about eight months out of the year.

FINANCIAL OPERATIONS OF BOTH PRISONS.

We cannot help feeling very much elated over the financial showing of this institution for the term covered by this report. We have deposited with the State Treasurer, over and above all withdrawals during this term, \$384,325.97, as against \$249,046.94 for the term ending November 30, 1900; as against \$304,002.34 for the term ending November 30, 1902, showing a net gain for the term covered by this report over the term ending November 30, 1900, of \$135,279.03, a net gain over the term ending November 30, 1902, of \$80,323.63.

This showing has been obtained by the practice of every economy possible with the proper maintenance of the institution, the application of thoroughly business methods and untiring work upon the part of those connected with the institution. Tabulated statements of different accounts have been furnished by the Chief Clerk of the Main Prison and Assistant General Manager and Superintendent of Brushy Mountain Prison, which are herewith filed and made a part of this report. From these statements it can be seen that the net earnings of the institution are largely in excess of the net earnings covered by any other period of this institution. It will be borne in mind that the net cash turned into the Treasury does not represent the entire net profits of the institution, but constitutes only a part of same. In addition to this large amount of actual net cash turned into the Treasury, large and extensive improvements have been made costing many thousands of dollars, which will be shown in the various itemized statements in the report referred to. The aggregate profits for both institutions for the two years being \$410,027.51. By examining the tabulated statements showing increase and decrease in permanent account, it will be found that these statements account in detail for the money spent in these improvements. An examination and inspection of the plants, together with the explanation contained in this report will be found to be conclusive of the necessity for the expenditure. All of these improvements have been paid for out of the earnings of the institution, leaving the

net cash balance turned into the Treasury before mentioned. We herewith file the different reports of the employes and officers of this institution, which are made a part hereof, and we beg to submit that we have carefully examined the same and found them correct, and they are submitted as a part of our report.

Respectfully submitted,

W. H. HARTFORD, *Chairman,*

M. M. MARSHALL, *Secretary,*

W. T. MURRAY,

Commissioner in Charge of Mines.

REPORT OF CHIEF CLERK.

NASHVILLE, TENN., November 30, 1904.

To the Hon. W. H. Hartford, M. M. Marshall and Wm. T. Murray, Board of Prison Commissioners, Nashville, Tenn.:

GENTLEMEN—I beg to submit herewith the statistical report of the operations and cost of maintenance of convicts at the Main Prison for the biennial term ending November 30, 1904, which I have endeavored to make as plain and comprehensive as I could, showing the operations in detail of every department, including cash receipts, the sources from which they came, the expenditures and purposes for which they were made, which can be readily checked by the books.

Very respectfully,

JNO. J. CHERRY, *Chief Clerk.*

Deposits exceed withdrawals for both prisons		\$384,325 97

BETTERMENTS.

1903, Main Prison	\$16,687 75
1904, Main Prison	5,888 47— \$22,575 22

The cash receipts for 1903 were \$162,381.62, as against that of 1902 of \$209,609.51, showing a decrease of \$47,227.89, which has been shown elsewhere in this report in the accounts of maintenance of Government prisoners, the sale of stock and dairy outfit to Nat Baxter, Jr., also the sale of wheat in elevators. The cash receipts for 1904 were \$167,906.83, which shows an increase over 1903 of \$5,525.21, and can be accounted for by adding the difference in the amount received from contractors over former contracts and deducting the amount of decrease in the U. S. Government account and brick yard sales.

Being without a dairy we, of course, had to buy all the milk and butter used at Prison at an average of more than \$200 per month, necessarily increasing our expenditures for the maintenance of convicts. In April of 1904 we began buying dairy cattle and repairing our barns, and are now using our own milk and butter, besides having a surplus of butter for which we find a ready sale.

We are pleased to state that every department of this institution shows a fair profit for the year 1904, as will be shown by the respective statements.

BIENNIAL REPORT
BRUSHY MOUNTAIN COAL MINES,
PETROS, TENNESSEE.

TERM ENDING NOVEMBER 30, 1904.

PETROS, TENN., November 30, 1904.

*To Hon. W. H. Hartford, M. M. Marshall and W. T. Murray,
Board of Prison Commissioners, Nashville, Tenn.:*

GENTLEMEN—We beg to submit herewith the Fifth Biennial Report of the operations of the Brushy Mountain Coal Mines, for a period of two years, ending November 30, 1904.

We attach hereto tabulated statements carefully prepared, which show fully the condition of the business and the result of operations for the period covered, as follows:

Balance Sheets.

Statements of Operating Accounts.

Statements of Receipts and Disbursements.

Statements of Increase and Decrease in Permanent Accounts.

Coal Cost Sheets.

Coke Cost Sheets.

Distribution of Convict Labor.

Cost of Maintenance of Convicts.

Your attention will be called to these statements in their order.

BALANCE SHEETS.

These balance sheets are a summary of the business for the period covered by this report, and show fully the results in all departments.

The assets shown represent the actual cost less depreciation charged off. It will be seen that this is a book account showing

only the actual investment less depreciation, and does not represent the actual value of the plant and investment, since it has never been the policy of this institution to figure on any increased values except as these increased values have been made by the actual outlay of money. The property belonging to the State in charge of this institution, in our opinion, is worth considerable more money than the books of this institution show, and is represented by the following:

1st. The increased value of the original land purchased by the State on account of the building of the railroad and the development of the mine.

2d. The purchase of 2,000 acres of additional coal land, which is fully explained in the last biennial report, which, in our opinion, at that time, added fully \$100,000 to the value of the plant over and above the cost of acquiring said property. This opinion of ours was concurred in by the Board of Prison Commissioners, as shown by the Fourth Biennial Report, page 35, and after a thorough investigation by the last Penitentiary Committee, appointed by the Fifty-third General Assembly, they also concurred with us in this opinion, and used the following language: "We do not exaggerate the value of the Arms' tract when we say that we have added at least \$100,000 to the value of the State's holdings at Brushy Mountain by this exchange." See Report, page 42.

On account of this purchase the State's property is worth \$100,000 more than our books show, to say nothing whatever of the enhanced value of the real estate.

A detailed statement of the depreciation charged off is shown, and amounts to \$4,935.64 for the year 1903, and \$3,366.16 for the year 1904.

This amount is a very liberal deduction on account of depreciation, in view of the fact that we have made such large expenditures for repairs.

During this biennial term we have entirely changed our electric haulage system at a considerable cost, and the expense of this change was charged to repair account instead of to betterment account.

We have also expended \$4,488.18 in prison repairs, only \$256.44 of which was credited to permanent improvement account.

We have also opened up a new haulway in Mine No. 1 at a cost of several thousand dollars. This expenditure was charged to repairs, and not to improvements.

We might name a vast number of other smaller items aggregating thousands of dollars which has been expended in bettering the condition of the plant, and we are fully convinced that on account of these expenditures there has been no depreciation at all, but that on the contrary the condition of the plant has been vastly improved; but these amounts have been charged off in pursuant to the policy of this institution since its foundation, the purpose being to ultimately extinguish the accounts by the time the coal is exhausted, and the plant thereby rendered of no value.

The time will arrive in the history of the institution when repairs and improvements should cease, and a larger amount of depreciation charged off, to the end that the life of the plant may be measured by the life of coal producing territory that can be worked from this plant.

Bad accounts to the amount of \$235.80 have been charged off during this term. However, this does not represent the entire loss, since a controversy arose between Geo. P. Howard, of Atlanta, and the management of this institution with reference to the fulfillment of contract that the Brushy Mountain Coal Mines had with him. This controversy was settled and compromised by giving the said Howard a credit memorandum for \$1,750, and in pursuant to the present policy this amount was charged back to coal, and the profit upon coal for this term has been reduced by this amount, since the account of Howard upon which he received this credit memorandum was made during this biennial term, it was proper to charge coal account with same instead of allowing it to appear as a lost debt. But it would be otherwise if the account had occurred in another and different biennial term.

This represents all of the worthless accounts on our books. We have, however, charged to "suspense account" \$626.47. This account is made up of accounts against parties who have failed, and a part of which we hope to collect.

The gross earnings from all sources for the first year covered by this report were \$347,409.28; expenses were \$157,602.17, or

a net profit for the year of \$189,807.11, this being in excess of the profits of any previous year by the sum of \$6,505.50. The gross earnings for the second year covered by this report were \$305,502.85; total expense, \$157,780.86, making a net profit of \$147,721.99, or a net profit for the two years of \$337,539.10.

The profits for the biennial term ending November 30, 1900, were \$260,043.01; for the term ending November 30, 1902, \$284,281.36; for the term ending November 30, 1904, \$337,539.10, showing an excess of profits for this biennial term over the biennial term ending November 30, 1902, of \$53,257.74; over the biennial term ending November 30, 1900, \$77,496.09.

The following table shows net earnings per man per day for the period covered by this report and for the two preceding years:

<i>Year Ending</i>	<i>Net Profits.</i>	<i>Total Per Man per Day. Maintained. Net Earnings.</i>
November 30, 1901.....	\$100,979 75	\$208,455 00 .4876
November 30, 1902.....	183,301 61	227,083 00 .8072
November 30, 1903.....	189,807 11	221,828 00 .8556
November 30, 1904.....	147,721 99	215,843 00 .6843

From the above table it will be seen that every man maintained by this department during the past two years has earned an average of about 77 cents per day, besides his own maintenance and the support of the institution.

The decreased earnings per man per day for the year 1904 under the year 1903 is principally due to the very high price of coke during the year 1903.

The above results are very gratifying.

STATEMENT OF OPERATING ACCOUNTS.

These statements show the profit and loss on different accounts for the two years covered by this report.

Profit on dwelling houses, \$625.85; profit on guard's boarding house, \$685.41; profit on swine account, \$685.83; loss on goat account, \$232.23; profit on garden operations, \$50.83.

From this statement it will be seen that we have gotten rid of the goat account by closing them entirely out, sustaining the loss as above stated.

The swine account has been reduced in accordance with previous recommendation, to just that number of hogs as can be

maintained with the swill from the prison, showing a present investment of \$523.25 in hogs, off of which in the last two years we have made a clear profit of \$685.83.

It will also be noted that both the dwelling houses and guard's boarding house has yielded in excess of previous years.

It will also be noted that there is a profit of \$1,771.40 on live stock. This profit is due to the increased price of mules upon the open market, and to the further fact that the management has been exceedingly active in selling and trading almost all of the worthless mules on hand; and to the fact that close attention has been given to the purchase of all new mules that have been needed, and in many instances decided bargains have been obtained.

It will be noted that the statement for the year 1904 shows a loss on account of the operating of saw mill of \$330.04. This saw mill account should have been closed into timber and tie account, to which its product goes. It will be seen that the timber and tie account for this year has a balance to its credit of \$284.56; hence, if the saw mill account had been closed into the timber and tie account, it will be seen that the loss on account of saw mill for this year would have been \$45.40.

This saw mill was located at the top of the mountain at head of Ould's incline, for the purpose of getting timber for Mine No. 4, in order to save transporting timber from the railroad, or valley mills, up this steep mountain to No. 4. The saw mill has been credited on account of lumber cut by the mill at the price at which it could have been bought, delivered in the valley, without counting anything for the expense of transporting it to the mine. If this expense had been added, the saw mill for this year would have shown a profit. However, the result is the same to the institution, since what was lost on account of the cheapness of the lumber to the saw mill account, was gained by Mine No. 4.

STATEMENTS OF RECEIPTS AND DISBURSEMENTS.

From the following statement it will be seen that the total cash receipts for the year 1903 were \$343,960.13; net amount of vouchers issued \$178,122.77; excess cash receipts turned into the State Treasury over vouchers issued \$165,837.36.

The total cash receipts for the year 1904 were \$310,487.52; net amount of vouchers issued \$162,885.89; excess cash receipts turned into the State Treasury over vouchers issued \$147,601.63, making a total for the two years of \$313,438.99, as against \$204,926.54 for the term ending November 30, 1902; and against \$197,589.03 for the term ending November 30, 1900, and an excess of cash receipts turned into the State Treasury for the two years covered by this report of \$108,512.45 over the biennial term ending November 30, 1902, and \$115,849.96 in excess of the net cash receipts shown for the term ending November 30, 1900.

We therefore have cause, not only to be entirely satisfied with the results of this operation for the last two years, but feel highly elated thereby.

STATEMENTS OF INCREASE AND DECREASE IN PERMANENT
ACCOUNTS.

The net profits as shown by the balance sheets for the two years as covered by this report are \$337,529.10, while the payment into the State Treasury in excess of withdrawals only amount to \$313,438.99, leaving a balance of \$24,090.11, which represents net increase in permanent accounts, which increase is represented by permanent improvements and other accessions to the assets of the institution, such as increased inventories, bills and accounts receivable, etc.

The purpose of these statements is to account in detail for this balance, which they do by showing the net increase to permanent accounts to be for the two years \$24,090.11 in excess of net decrease.

COST AND OUTPUT OF COAL.

It will be noted from these statements that the output of coal for the year 1903 was 237,592.75 tons; for the year 1904, 261,202.35 tons, making for the two years 498,795.10 tons as against 486,503.65 tons for the biennial term ending November 30, 1900, and 483,703.45 tons for the term ending November 30, 1902, making a net increase in the output over all previous years of 12,291.45 tons.

For the year 1903 we shipped 132,510.90 tons of coal; we coked 103,751.50 tons; for the year 1904 we shipped 155,574.35 tons of coal and coked 105,528 tons. The average cost per ton for the year 1903 was .5550 per ton; for the year 1904, .5124 per ton. The discrepancy in the average cost of coal for these two years, as well as the excess cost for this term over previous years is accounted for:

1st. On account of increased price of all supplies.

2d. On account of the expenditure for improvements in electric haulage, prison repairs and expenses of No. 20 left, Mine No. 1, all of which are charged to general expense; which general expense is divided between the cost of coal and coke, coal having to bear its proportion.

The average price obtained for coal for the year 1903 was \$1.2771 per ton; for the year 1904, \$1.2188 per ton, making a profit on each ton of coal for the year 1903 of .7221; for the year 1904, of .7064 per ton.

COST AND OUTPUT OF COKE.

These statements are self-explanatory. For the year 1903 it will be seen that we coked 103,751.50 tons of coal, producing 58,538.35 tons of coke. Of this amount we shipped 57,978.10 tons at an average price of \$3.0678 per ton, realizing \$177,865.08.

For the year 1904 we coked 105,528 tons of coal, producing 59,940.90 tons. During this period we shipped 60,714.50 tons, which we sold at an average price of \$1.8860 per ton, realizing \$114,604.04. The average cost of coke for the year 1903 was \$1.3550 per ton; for the year 1904 it was \$1.2877 per ton. This of course includes the coal coked, which is charged at the cost of producing the coal.

DISTRIBUTION OF CONVICT LABOR.

These statements show the distribution of convict labor by the month during the period covered. You will note that there were 83,324 men cutting coal during the year 1903, producing an output of 237,592.75 tons, or 2.85 tons per man per day.

For the year 1904 there were 83,125 men cutting coal, who produced an output of 261,202.35 tons, or 3.14 tons per man per day. For the two years there were 166,449 men cutting coal, producing an output of 498,795.10, or an average of 2.99 tons per man per day.

We maintained 221,824 men during the year 1903, and 215,843 during the year 1904. During the two years there were twenty-seven escapes, of whom twelve were recaptured. During 1903 we had twenty-five deaths, and during 1904 we had twenty-eight deaths.

This death rate is considered very low, since during this term we have had two epidemics, one of flux and one of spinal meningitis.

COST OF MAINTENANCE OF CONVICTS.

The total cost of maintaining convicts for the year 1903 was \$77,585.66, or .3497 per day per man. For the year 1904 the total cost was \$78,054.35, or .3616 per day per man. This is an increase cost of maintenance caused by the extraordinary high price prevailing during the term for all kinds of supplies that enter into the maintenance of the convict. Furthermore, we have now developed two new mines and the old mine has two additional openings, which was necessary to be made by reason of the facts stated in other portions of this report. These additions have largely increased the guard force. The expense of guarding goes to the maintenance account, and besides, the last Legislature passed a law allowing each guard a leave of absence of ten days, and a five days' sick leave on full pay. This has added a considerable sum to the cost of guarding the convict.

The annual report of 1903 is incorporated in this report in its entirety, the reason for this being the recent change in Superintendents. This report treats at length several subjects and gives data and statistics with which the present Superintendent is not familiar, owing to the short length of time he has been connected with the institution.

COST AND OUTPUT OF COKE.

These statements are self-explanatory. For the year 1903 it will be seen that we coked 103,751.50 tons of coal, producing 58,538.35 tons of coke. Of this amount we shipped 57,978.10 tons at an average price of \$3.0678 per ton, realizing \$177,865.08.

For the year 1904 we coked 105,528 tons of coal, producing 59,940.90 tons. During this period we shipped 60,714.50 tons, which we sold at an average price of \$1.8860 per ton, realizing \$114,604.04. The average cost of coke for the year 1903 was \$1.3550 per ton; for the year 1904 it was \$1.2877 per ton. This of course includes the coal coked, which is charged at the cost of producing the coal.

DISTRIBUTION OF CONVICT LABOR.

These statements show the distribution of convict labor by the month during the period covered. You will note that there were 83,324 men cutting coal during the year 1903, producing an output of 237,592.75 tons, or 2.85 tons per man per day.

For the year 1904 there were 83,125 men cutting coal, who produced an output of 261,202.35 tons, or 3.14 tons per man per day. For the two years there were 166,449 men cutting coal, producing an output of 498,795.10, or an average of 2.99 tons per man per day.

We maintained 221,824 men during the year 1903, and 215,843 during the year 1904. During the two years there were twenty-seven escapes, of whom twelve were recaptured. During 1903 we had twenty-five deaths, and during 1904 we had twenty-eight deaths.

This death rate is considered very low, since during this term we have had two epidemics, one of flux and one of spinal meningitis.

STATE COAL MINES, PETROS, TENN. DISTRIBUTION OF CONVICT LABOR FOR YEAR ENDING NOVEMBER 30, 1903.

COST OF MAINTENANCE OF CONVICTS.

The total cost of maintaining convicts for the year 1903 was \$77,585.66, or .3497 per day per man. For the year 1904 the total cost was \$78,054.35, or .3616 per day per man. This is an increase cost of maintenance caused by the extraordinary high price prevailing during the term for all kinds of supplies that enter into the maintenance of the convict. Furthermore, we have now developed two new mines and the old mine has two additional openings, which was necessary to be made by reason of the facts stated in other portions of this report. These additions have largely increased the guard force. The expense of guarding goes to the maintenance account, and besides, the last Legislature passed a law allowing each guard a leave of absence of ten days, and a five days' sick leave on full pay. This has added a considerable sum to the cost of guarding the convict.

The annual report of 1903 is incorporated in this report in its entirety, the reason for this being the recent change in Superintendents. This report treats at length several subjects and gives data and statistics with which the present Superintendent is not familiar, owing to the short length of time he has been connected with the institution.

STATEMENT OF MINE DEVELOPMENT FOR 1903.

MINE NO. 1.

Referring to the attached statement of the condition of Narrow Work, No. 1 Mine shows vast development on the right of main entry since the last biennial report. You will also notice from said statement that practically no advance work has been done on the right of main entry since 1899, until the latter part of 1901, when what is known as No. 20 Right was reopened, the debris removed, new tracks laid and the work of entry-driving again taken up. This entry had advanced only a short distance when a radical change in the geological formation grew apparent, and for some time this work looked very encouraging, and for a short distance a section at the face of said entry showed forty-six inches of clean coal, and at the time we supposed we had at last driven through the fault that has been mentioned in previous reports, and had cut out twelve entries.

We find this fault to be lying in the direction of the "butts" of the coal, and having a bearing of South 30 degrees West. As the work advanced in 20 right entry, the fault gradually grew apparent, and it is now general on the side of the mine, although the amount of the impurities in the coal varies, and as the muck increases the coal decreases, but the impurities in the coal disappear. This entry has advanced 2,437 feet from the main entry, and the amount of impurities in the coal was so great that it was impossible to mine this coal and sufficiently clean it to make it marketable. This entry was stopped on account of fault. A section at the face of said entry is as follows:

Eight inches of coal on the bottom, immediately over that is seven inches of bastard fire clay and rash, above this is nine inches of coal, over this and next to the slate is eight inches of bastard cannel coal.

From No. 20 Right No. 19½ entry turns to the right at an angle of ninety degrees and is driven parallel with the main entry. Four entries are turned to the right and two entries are turned to the left from this entry (19½).

The entries on the right have been driven to their limit or to the main entry, and are about finished, the pillars and stumps being drawn.

The coal on the right of No. 19½ remains comparatively clean, occasionally a seam of rash occurs ranging from two to five inches. No. 19½ has been driven in clean coal its entire distance. The entries on the left of No. 19½ were so dirty and the coal so full of impurities that they were abandoned.

No. 19½ is being pushed with all available speed with the intention of using same for a main haulway after said entry connects with No. 10 Right. Nos. 9 and 10 Right were the first entries to strike the fault, and they reached it after being driven 1,800 feet.

The next entries to reach the fault were Nos. 11 and 12, then 13, 14, 15 and 16 were driven about 1,000 feet, and a section at the face shows coal thirty inches, and thirty inches of muck or fire clay and a rash parting occurring about five inches thick in the center of the coal. Entries Nos. 17 and 18 Right were only driven about 200 feet when, striking the fault, they were stopped.

The main entry struck the fault after being driven about 3,500 feet. On account of the "squeeze," or "fault," minutely described in previous reports, all work on the right of main entry in this mine was abandoned early in 1900, and all mining operation and advance work was confined to the left district, where the coal made an average of thirty-six inches, and no muck and thin coal to contend with.

NO. 10 RIGHT.

Since the latter part of 1899 all the coal produced from this mine has been from the left district, and as these left entries were rapidly approaching the property line, it was decided to test the coal field and the width of the fault on the right.

You will remember it was outlined in the last biennial report to take up the work of entry driving at test pit No. 10 just back of prison and push the work forward until No. 10 Right entry was reached, the purpose of this cut out being twofold: 1st, for draining and maintaining a waterway that would reach the lowest level of the basin of the left district; and, 2d, to be used as a manway from prison to mines in the event our present one becomes more dangerous.

The draining of the left district through this cut-out was a failure ultimately, but it affords a good dumping ground for slate, and also furnishes an intake of fresh air for this district.

In March of this year, after the effect of drainage through this cut-out proved to be a failure, No. 10 Right entry was reopened, the falls of roof and debris removed, and the body of water contained in said entry was found to be about four feet deep in the deepest place and about 300 feet long. A ditch was next suggested and work on same was commenced immediately.

It was thought by cutting a ditch from basin to the right main air course the water would take care of itself from there to the outside. This was soon abandoned, and very little work done, as it was found that it would require a ditch to be shot in the sand rock four feet deep and 800 feet long to take care of all water accumulated in the lowest level.

The third and last method thought of was to shoot the slate from the roof in this basin into the water, raise the track high and dry and open a new district beyond, maintaining this entry as a haulway. This work was soon accomplished, a track laid with new ties and 20-pound section steel, and the coal mined in this district is hauled to the tipple by a 4-ton Jeffrey locomotive.

No. 20 Right entry has advanced 900 feet, and from which five cross entries are turned and a new district started, employing forty-two men, with an output of three and one-fourth tons per man. Although this district shows the effect of the "squeeze," or fault, the coal remains perfectly clean and free from any impurities. Rapid development, however, is considerably delayed by the frequent occurrence of "squeezes," sometimes squeezing the coal as low as ten inches.

Fortunately the squeezes are only local and the vein soon assumes its regular formation, and better progress is made.

As mentioned before the entries on the left of main are rapidly approaching the property line, and nothing remains but to push the new development on the right and explore the territory north with the expectation of developing a field of workable coal of vast acreage.

No. 10 Right district and No. 20 Right district only like a few hundred feet of being together. When this connection is made it will enable us to have all coal mined in both districts hauled to main entry and tipple through No. 10 Right, and will also enable us to rob all worked out entries on No. 20 Right district of all pillars and entry stumps, therefore breaking the top, obtaining a

good fall and lessen the danger of renewing the old "creep" that has crossed the main entry. The geological formation of the strata overlying the Brushy Mountain seam, or the (Jellico) rather, makes economical mining operations very difficult. This said vein of coal is overlaid with a blue slate ranging in thickness from two feet to twenty feet. Above this slate is a very hard sandstone that is very tough and springy, making it almost impossible to break this rock in our rooms, and with this thin coal the rock will sag and bend like a piece of whalebone until it causes the soft fire clay bottom to heave until the top and bottom comes together. The top begins to swing then, and a creep is brought on, and if the safety pillars, entry pillars and stumps are not of sufficient strength to withstand this swing, the creep moves on and consequently follows the new operations right along until the top is broken or a pillar of coal left of sufficient strength to check or arrest it. You can readily see to handle this top the robbing of pillars and stumps must be complete and extend over a large area in order that the fall will be general in order to break the sand rock above the slate.

HAULAGE.

The electric haulage plant so minutely described in last biennial report, consisting of six third rail grip motors, proved to be a continual source of trouble and expense since their installation.

As recommended in the last biennial report, the electric haulage was extended on No. 17 Left for a distance of 2,000 feet to eliminate the disagreeable feature of mule haulage on this hill, 1,200 feet of this extension being on an average grade of two per cent, and with a maximum grade of four per cent against the empty cars.

This extension was completed, the third rail, bonding and trolley placed, when it was only a short time until it was found that a force of three mechanics and three helpers were unable to keep these motors in sufficient repair to haul the output. The breakdowns were so numerous and the delays so frequent that we were forced to cut the trips down one-third, or from thirty cars to twenty. The motors were able to haul thirty cars from the tipple to a side track located about 6,000 feet from the entrance, there the trip was reduced to twenty cars before attempt-

ing the hill, the remaining ten cars were hauled to the working by a string team of two mules. This was very unsatisfactory, however, and considered a loss of time, and we were only able to handle about 500 tons per day. Consequently the men were unable to get their tasks and half their rooms were full of loose coal; could not get cars to load it in.

In the latter part of January this extension was cut out, the third rail taken up and mules were again put on. The output immediately went up, but the work was so severe on stock that we were immediately compelled to buy ten new mules.

Cutting out this extension, however, did not relieve us of our trouble, as the motors continued breaking down and were a constant source of annoyance. We had about 16,000 feet of third rail in place, and the "I" beam was so badly worn that it was impossible to keep the motors in repair without removing the entire line of third rail.

The "I" beam being worn so badly, and so irregular, it was impossible to make the grip wheels on motors retain their grip on "I" beam when striking a place that was badly worn and greatly diminished in cross section. Then, again, when the grip wheels were drawn against the "I" beam where same was badly worn, with sufficient force to haul the load, then momentarily striking a larger section or a piece of "I" beam showing little wear, it was impossible to open grip wheels in time to save the gearing and brasses.

At the time these motors were taken out of the mines they were requiring a new set of brass bearings every eight or ten days at a cost of thirty-eight dollars per set, and the pinion on the lower end of armature shaft cut from the best tool steel were only lasting two and three weeks. These pinions were made by Brown & Sharpe, Providence, R. I., and cost eight dollars apiece.

Had these motors been retained for the purpose of hauling the coal, it would have been absolutely necessary to replace the entire line of third rail. The "I" beam alone for this extensive repair would have cost \$1,119.93. Then the removal of old rail and relaying the new would have incurred an expense of forty-five cents per yard; this includes timber, bolts, lag screws, nails and labor. This item amounts to \$2,133.20.

Laying third rail is a slow, tedious and laborious task, as the timber must first be laid down, carefully gauged and nailed; then the "I" beam must be laid on top of timber, punched and carefully gauged to determine the exact center of track, then a hole bored through timber and tie and a 5-inch carriage bolt inserted through "I" beam, timber and tie, with a nut placed on bottom of bolt beneath the tie to prevent the third rail being pulled up by the grip wheels. This necessitates the digging out from under the tie sufficient space to operate a monkey wrench to draw bolt down perfectly tight.

You can readily see that the expense of replacing new "I" beam and third rail without mentioning repairs on grip motors, would have almost paid for two 8-ton traction motors of sufficient horse power to haul thirty-five empty cars on each trip up a grade of four per cent and with a speed of ten miles per hour on level grade.

Our present haulage consists of three 8-ton locomotives of Goodman make, one 6-ton locomotive of Goodman make, one 4-ton locomotive of Jeffrey make, making a total of five locomotives employed in No. 1 Mine.

By installing this type of locomotive no change in the entries or tracks were necessary, as these locomotives are mounted high enough to allow them to run over the old third rail, this being a great feature in our favor. Had it been necessary to remove the entire line of third rail before traction locomotive could have been employed, it would have taken at least 300 men, working Saturday night, Sunday and Sunday night, to have removed the third rail and put things in shape for the traction locomotives, but in this case the locomotives were run in connection with the grip motors until all the traction motors were on the ground and ready for the mines. The grip motors were then taken out and the work of removing the third rail begun.

Our new locomotives are very compactly built, having their wheels on the outside of frame, enabling them to be operated in our narrow haulways that have been affected by the old creep.

By installing these locomotives we were again able to take up the extension on No. 17 Left that was abandoned in January on account of disability of grip motors. Our electric haulage at present is extended to the main cross haulway, and overcomes

the disagreeable feature of driving mules on this heavy grade and cutting off thirteen mules and drivers.

These locomotives are powerful machines, being of the single armature type, double reduction, and have a rating of eighty-six horse-power. We are able to haul thirty-five empty cars on each trip daily up a grade of four and sixteen one-hundredths per cent. They are giving absolute satisfaction in every way, and the four locomotives have not cost us one hour's idle time since their installation. At present we haven't the slightest trouble hauling every ton of coal to the tipple that we can possibly mine.

IMPROVEMENTS.

Immediately upon getting fairly under way at the new power station, we were compelled to install a new boiler to operate ventilating fan at No. 1 mine. One of the old 45-inch horizontal tubular boilers that was used in the battery to generate steam at the old powerhouse was removed from its old setting, thoroughly overhauled and repaired and used to operate fan at No. 1. The old boiler that we had in place there was of the locomotive fire box type, and was so worn and thin that it had been condemned by the inspector.

WATERWORKS.

A new boiler and pumping station was erected at reservoir this spring, and the water question and supply has been little thought of this summer. The boiler used for this station is one of the old 45-inch boilers that we used in the battery at the old power station.

MINOR REPAIRS AND IMPROVEMENTS.

Two new elevators or conveyors have been installed in connection with the coal crusher; one to handle the lump coal from the shaking screens to the crusher, and the other handles the crushed coal or slack from the crusher to the wet coal elevator that conveys the washed coal from the washer to the wet storage bin. Both of these conveyors are driven direct from the main line shaft of washer, one receiving power from a bevel gear, and the other a rope drive. The old washer has had the following repairs:

New perforated screens both top and bottom; new valves, seats, suction and discharge pipes for pulsometer pumps; new gate valves on both discharge pipes from pulsometers; new tap ring on washer hopper; new overflow spout, and the stirrers given a general overhaul.

A new trussed roof has been placed on the old boiler room and the walls made higher to permit room for additional windows to furnish sufficient light for blacksmith shop.

FREIGHT INCLINE.

Since the opening of No. 1 mine, in 1894, it has been a problem, and a difficult job, to get supplies to pit mouth or portal, and since the adoption of monitor system on incline, the nut was harder to crack than before. While the mine cars were being let down the incline by gravity and tipped at the lower end of plane, most of the freight and supplies was hoisted on top of the tippie by a friction hoist operated by a belt driven by the main line shaft from the washer engine. After the material and supplies was hoisted up to top of tippie it was loaded into the empty trip of tram cars and carried up the incline to the mine. This mode of getting supplies up was abandoned when the monitor system was adopted, as transferring freight from the monitor cars is a difficult task, and so delays the run that it has never been practiced.

All the supplies used at this mine had to be hauled by wagon up the valley for a distance of 5,000 feet, and at this point transferred from wagon to a car on a tram road that had been graded on the coal level and on the contour of the mountain. This tram road was laid with 16-pound section steel, and with its meanderings contained about 5,500 feet of track, or 11,000 feet of rail. This tram road required constantly a man and mule to haul the supplies from the wagons to the mines. It being an uphill pull all the way from the supply store to the tram road, and over a rough road in winter time, it was almost impossible to haul anything more than empty wagon.

The management in the early part of the year thought it advisable to install a freight incline on the same plane as that of No. 1 for the purpose of hauling supplies to the mine, and therefore do away with the use of the man and the mule employed on

tram road, and at the same time giving us the steel with which same was laid for inside purposes.

The work on the freight incline was soon accomplished, and the friction hoist that had been in the scrap pile since the adoption of the monitor system on No. 1 incline, was gathered up piece at a time from the scrap, assembled and installed at the top of incline and driven by a 30-horse power motor of the General Electric Company, and direct connected by a Reynold's silent chain. The motor was purchased second-hand from the Rossiter-McGovern Company at a very low figure, only \$300 f. o. b. St. Louis. This hoist operates the freight incline and thus enables us to get supplies from commissary to portal of mines within five minutes notice. This incline solved a difficult problem by our being able to hoist up the 8-ton traction motors, and the lowering of the old grip motors when they were to be shipped.

This incline is very conveniently located, as the lower terminal is just opposite the back door of the machine shop, making it very easy to handle defective parts and breakdowns of our electric locomotives right to the machine shop.

MACHINE SHOP.

After engines and generators were removed to new power house, the old station afforded an excellent room for machine shop. It is conveniently located and has plenty of light and room. Heretofore the shop was located under the tipple, and to say the least was very dirty, it being impossible to prevent the fine dirt and dust from the shaking screens from finding its way in.

The power for this department is furnished by a 15-horse power motor of the General Electric Company.

MINE NO. 4.

This mine is located in the south side of Frozen Head Mountain and almost due north from No. 1.

The mine is opened in what is known as the middle pioneer seam, which has an elevation of 2,650 feet above sea level, and has an average thickness of fifty inches. The coal is extremely black, very hard and breaks with a cubical fracture, but possesses a long slip. It does not deteriorate with the weather, and is an excellent coal for domestic purposes.

This mine is reached by an incline plane 4,060 feet in length and has a vertical rise of 1,150 feet. The plane is laid with 40-pound section Illinois steel, angle fish plates and lock nuts on each bolt. Three rails are used above and below the parting, therefore eliminating the use of frogs and switches, and reducing the liabilities of wrecks.

The plant consists of a horizontal drum of the sheave pattern with 5-foot wheels, being grooved three and four respectively, and controlled by a powerful differential brake lagged with hard maple blocks. This drum was bought of S. B. Stine & Son, Osceola Mills, Pa., for \$750.

The drums are threaded with one of A. Leschen's Hercules patent rope of one and one-eighth inches diameter. The incline has iron rollers spaced every thirty feet to hold up sag in rope, reducing wear on same to a minimum. On each end of the rope is fastened an eight and one-half ton automatic drop bottom monitor car.

The coal from this mine is hauled to the tippie by mules, and the coal is tipped into a chute 250 feet long, ten feet wide and six feet high, having a capacity of 120 tons every fifty feet. The coal is taken out of this chute by means of a door in the lower end, which allows the coal to empty into a cross chute that conveys it to the monitor cars.

The cross chute was necessary in connection with the main chute at this mine for this reason: Immediately in front of the mine entrance, and on a tangent line with incline was a small hollow with the conglomerate coming to the surface in places, as the soil was very thin. Considerable water being shed into this hollow, the surface was continually sliding, rendering it unsafe to build chute on. The chute was built thirty feet to the west on a rock ledge; consequently thirty feet of a cross chute had to be used to bring coal back in line with incline.

The chute is constructed on a pitch of twenty-seven degrees and is lined with sheet steel one-eighth of an inch thick. This coal, averaging seventy per cent lump, slides down the chute with terrific speed. To overcome this and to reduce breakage of coal to the minimum, three alligator automatically operating doors are used in the chute to retard the speed of the coal.

The work on No. 4 incline was commenced in the early part of October, 1902; the grade work was in operation until about the middle of December of the same year. The weather being too severe for dirt moving, work was abandoned until 1903. The grade was again taken up and the mine was put in operation on November the 4th of same year.

The present outlook for this mine is very encouraging. The face of entries No. 2 and No. 3 Left shows coal five feet two inches thick, and the mining seam that occurred near the bottom, and was thought to be general, has decreased in thickness to two inches.

All narrow work at this mine is being pushed as rapidly as possible, and we expect by the first of next year to have room for sixty men, with an average output of five tons per man per day.

COAL BINS.

The 700-ton coal bin for washed coal mentioned in last biennial report is in very bad condition, being rotten throughout, with the exception of the new timbers that were put in the latter part of last year. The new timber was placed under the bin, and same was greatly strengthened. New timber has been ordered to repair this bin, but same will have to be rebuilt within the course of a year.

The dry coal bin has been very much strengthened and braced, and will doubtless last until a new one of larger capacity can be built.

DWELLING HOUSES.

Two dwelling houses have been erected this year, one for the doctor and the other for an employe. The houses are located north of the coke ovens, and along the foothills of Frozen Head Mountain. They each have four rooms ceiled throughout, are boxed and battened and have shingled roofs. One new room each has been added to six of the new houses built last year; also a new room added to the house purchased from Chandler. Several new roofs have been put on, and a new porch covered with shingles has been added to the boarding house.

We have also built one double log house at the head of Ould's incline, and is occupied by saw mill man.

GARBAGE CREMATORY.

This crematory described in last biennial report was put in operation in the early part of the year, and has been kept in constant operation since. We are burning garbage and refuse from the prison and mines, and thereby eliminating the use of pits, and greatly improving the hygienic condition of prison and camp.

The crematory is situated west of the prison and about 100 feet higher in elevation. With its tall chimney the fumes are well taken care of, and no offensive odor is present.

HAULAGE ROADS.

While the grip motors were in operation in our No. 1 mine it was almost impossible to keep the haulage roads in good condition, and especially in No. 18 Left, where the "creep" had affected the ribs of the entry and pushed the timbers out at the bottom until the entry is less than five feet in width in several places.

With the third rail bolted to the ties in the center, it was sometimes an hour's time for the entire track gang of men to replace a tie that had rotted or become in some way defective, as the entire section of track where the repair was necessary had to be jacked high enough to admit of the tie that was being replaced or removed to turn parallel with the track and gradually worked into place beneath the other ties and third rail.

While the grip motors were in operation we had considerable 16 and 20-pound section steel laid on the main haulways and side tracks. When our 8-ton motors were installed, it was not economical nor advisable to attempt to operate these heavy machines over this light steel. So all the rail of light section was removed and replaced with new rail of 35-pound section, making our haulage road throughout laid with heavy steel.

Our haulage road in its entirety is equipped with stiff frogs and 5-foot split switches, making it almost impossible to have a wreck of any consequence through carelessness of the motor-man or switch tender failing to set the switch properly. The switch would be split but would suffer little damage otherwise. Six of these switches in the mine work automatically, and are therefore not guarded by trappers.

The mine roads are in first-class condition in every respect, and with our mine cars in their present state of repair we rarely have a car off of the track, and it would be an easy matter with our present haulage to handle our output of 2,000 tons daily.

MINE NO. 3.

Mine No. 3 is located in the south side of Frozen Head Mountain, is directly opposite No. 1 and is opened in the Jellico vein. This mine, opened as it was in the foot-hills of Frozen Head Mountain, has been a costly operation. The coal measures on this side of the mountain seem to be very much disturbed by a fault.

The narrow work in this mine has been pushed energetically since the last biennial report, as was recommended therein, but owing to the irregularity of the vein, and the thinness of the coal, room work has been slow; but judging from indications and the geology of this vein, we expect good coal when we reach the center of mountain, or when we get more covering over the coal. For a distance of about 1,000 feet this vein of coal was overlaid with a seam of bastard cannel coal ranging in thickness from four inches to sixteen inches, thus possessing too much bone and other impurities to be marketable. The coal has for a bottom a bastard fire clay (commonly known as muck) ranging in thickness from eighteen to forty-two inches. In this fire clay are numerous kidney rocks and boulders that make it very hard to work, on account of getting holes bored to blast it. When a drill bit strikes one of these boulders the driller can do nothing but take the bit out and start a new hole. Sometimes at least half a dozen holes are tried before one is finished.

Taking this lift was so expensive, and required so much powder to shoot it, that all entries were changed the first of this year and are now worked on top of this fire clay, blasting the slate top to obtain proper height.

Entries Nos. 3, 3½, 4, 4½ Left, and also the main entry and air way are in clean coal and have an average thickness of twenty-eight inches of coal. All the bastard cannel that was overlying the coal has disappeared, and we have a hard blue slate top of even structure.

The prospects for No. 3 are very good and the coal looks promising. We have employed in this mine at present fifty-two men with an average output of 130 tons of coal daily. From the statement of narrow work in this mine, you will notice that our cross entries have been rapidly advancing since the last biennial report.

Mine No. 4.

Total for two years ending November 30, 1904.....	6,233 feet.
---	-------------

MINE NO. 1.

The successful operation and output of Mine No. 1 has been seriously affected during the last year by the "squeeze" or "fault" encountered. This fault has been fully described and treated at length in previous reports. At the present time this squeeze or fault has been encountered in all advance work, and its presence is apparent from the extreme right or northerly to the extreme left or southerly workings.

The main slant entry driven from intersection of No. 10 Right, and No. 10 cut out, with a bearing of N. 67 degrees W.

strikes the fault approximately at right angles, and has penetrated it further than any of the other advance work.

Sections were taken at intervals of fifty feet for the last 400 feet driven on this entry; these show an average thickness of fifteen and one-half inches coal with twelve inches of fault or parting. An analysis of these sections show that this fault or parting has increased from a two-inch seam of dirt and rash to nineteen inches of hard rock, similar in texture to the hard blue slate found above the coal. The top seam of coal shows an increase of a few inches in the last 100 feet of entry driven. This may indicate that the center of the fault has been reached or passed. This, however, can only be determined by further exploration, and to that end the main slant entry and airway are being pushed to prospect this territory with the hope of finding a good body of workable coal beyond the fault.

By referring to attached statement of condition of narrow work in Mine No. 1, you will note that the greater amount of development has been on right side of main entry (due to the fact that territory on left is practically exhausted). No. 20 Right has been driven a distance of 2,865 feet from main entry but has been stopped on account of squeeze or fault above referred to. A section of this entry at heading shows twelve inches coal in two seams with twenty-one inches parting between the seams.

These conditions maintain for the last 100 feet of entry driven, making further advance in this direction impracticable. Entries "C. D. and E. F" are also affected by the fault to a considerable extent. Sections in these headings show twenty-two inches to twenty-five inches coal, three inches to five inches rash and dirt between seams.

Entries "E. and F.," being further advanced into this fault than "C. and D.," show a corresponding decrease in coal and increase in thickness of the fault. Entry No. 19½, known as Gill entry, is turned from No. 20 Right and has been driven 1,442 feet. From this entry Butt entries Nos. 1 and 2 North, and Nos. 1, 2, 3, 4, 5, 6 and 7 South have been turned. Nos. 1 and 2 North were abandoned after crossing main slant entry on account of fault. No. 1 South has been driven through to main entry. No. 2 South was

cut off after driving 225 feet by squeeze in coal. Nos. 3 and 4 South are driven through, connecting with Nos. 16 and 15 Right off main entry. Nos. 5 and 6 have been stopped after driving 553 feet and 509 feet on account of water in No. 14 Right district. These entries only lack a few hundred feet to connect with Nos. 13 and 14 Right, and will be driven through in a short time. No. 7 Left is driven 520 feet, and only lacks a few hundred feet to connect with workings on No. 12 Right. On the left of main entry, entries Nos. 17, 18 Left and 17½, 18½ Left have been driven to property line on west. The shaft entry lacks only about 100 feet of being driven to property line, and No. 12 off shaft entry is driven to outcrop. Entries Nos. 19 and 20 Left are driving toward property line, but lack several hundred feet of being driven up. These two entries are in a direction practically parallel with the fault and show the effects of same for almost their entire length. An average section for last 500 feet driven on these entries show twenty-five inches coal and three inches rash and dirt. These are the only live entries in the mine, and will soon be driven to their limit: i. e., property line. (See recommendation in regard to leasing or acquiring adjoining property.)

In February, 1904, it was decided to reopen No. 20 Left and use this entry as main haulway in place of No. 18 Left, which is badly affected by the "creep" referred to in previous reports. Work was started at once and has progressed slowly, but satisfactorily up to the present time. The entry is "brushed" for entire length to main cross haulway and is being timbered in a thorough manner with 12x12-inch sawed timbers. The track is laid for the greater portion of its length with 35-pound Illinois Steel Company section steel rail, and 5x7-inch sawed ties. This gives a good substantial track, and it is expected that it will withstand the heavy service of 8-ton locomotives and thirty-five to forty loaded tram cars in a more satisfactory manner than the lighter section of rails used heretofore on locomotive haulways. This haulway is now in use for a portion of its length, and will all be open for use at an early date. This will enable us to abandon old haulway through No. 18, which is becoming more dangerous every day, and give us a much better and safer haulway, as we hope, beyond the influence of the "creep."

An approximate estimate of costs for constructing this haul-way are as follows:

Labor, cleaning up, brushing and timbering entry.....	\$2,760 00
Cost of timbers employed.....	640 00
Total	<u>\$3,400 00</u>

Two connecting rooms between No. 14 and No. 10 Left were picked up and brushed out, forming an entry to the pillar and stump work on Nos. 9 and 10 Left. This entry is 710 feet in length and was put through for about \$250. Track has been laid, and the trolley line extended to No. 10, enabling the locomotives to reach this district.

During the past year the old "Snow" pump has been overhauled and converted into an electric pump. This pump has been installed on No. 10 Left, to enable us to win the pillars and stumps on Nos. 9 and 10, 13 and 14 Left. This pillar and stump work has just been started, and is giving us some excellent coal. As soon as the pump can be spared from present location it is our intention to remove same to No. 16 Right district and begin robbing the pillars and stumps in that district, at present inaccessible owing to basin of water.

The present outlook for advance work in Mine No. 1 is not very bright. The fault above referred to has so far affected the whole northwest side of mine as to render entry driving and room work very expensive, decreasing the output and making it harder to eliminate the dirt from the coal, and unless a good body of coal is encountered beyond this fault in the prospect work now being carried on by the main slant entry, the present output of this mine cannot be permanently increased, and life of the mine will be limited to the time necessary to rob the mine of its pillars and stumps.

HAULAGE, MINE NO. 1.

The electric haulage plant of grip motors and third rail system, described in last biennial report, has been superseded by overhead trolley system and electric traction locomotives. (See report of 1903.)

These locomotives are giving satisfaction in every way, and the expense for repairs is now reduced to a minimum. The

haulage roads throughout the mine are in good condition. New ties have been put in and worn-out rails replaced wherever necessary.

VENTILATION.

Ventilation in Mine No. 1 is secured by fan and furnace. The fan is located at mouth of right return airway, is sixteen feet in diameter, driven by twenty-five H. P. motor.

The furnace is located on return airway to new cross haulway, has a grate area of fifty-six feet, stack thirty feet in height with sixty-foot shaft; these furnish ample ventilation for entire mine.

MINE NO. 3.

As shown by the yardage reports, the narrow work in this mine has advanced rapidly during the last two years. The entries are all in good clean coal, constantly increasing in size.

The main entry and air course show thirty-four inches clean coal, and Nos. 4 and 4½ Left each show thirty-eight inches clean coal. The main entry and air course have been deflected seventeen degrees fifty feet to the left at a distance of 1,510 feet from portal. These entries, called No. 1 and 2 Main, are driving towards the "new river" outcrop, and it is expected that the coal will continue to improve as the entries advance, as the "new river" outcrop shows from three feet to five feet of excellent coal. We now have an average of seventy-six men employed in this mine, with an average output of 200 tons of coal daily.

The haulage roads in this mine are in good condition, and are constantly being improved by the addition of new ties and rails; and bringing the track in alignment and up to uniform grade.

Ventilation of this mine is secured by furnace and stack located in airway. The grate area of the furnace is only thirty-six square feet, and while this has furnished sufficient ventilation up to the present time, our increased workings will shortly demand an increase in air supply. (See recommendation in regard to exhaust fan for Mine No. 3.)

MINE NO. 4.

At the time of the last biennial report work on No. 4 Mine was just fairly begun, and reference to the yardage report hereto

attached shows that the narrow work has advanced rapidly since that time.

The mine began to produce in December, 1903, and has been in successful operation since that time. The coal is mined by the electric coal cutting machines, formerly in use in Nos. 1 and 3 Mines. Three machines are in use, two being of Jeffrey make and one Morgan-Gardner. All are breast chain type of thin vein coal mining machines, driven by electric motors. An average of fifty men are employed in the mine with an average output of 130 tons daily.

The drum at the head of the incline has given us considerable trouble for the last four months; frequent breakdowns have occurred, causing much loss of time. The original sheaves have recently been replaced with two new ones of the same diameter but of slightly heavier construction, and it is hoped no further trouble will be experienced with this drum until such time as other sheaves especially designed and constructed for the heavy service required of them can be installed.

VENTILATION.

The ventilation of this mine is procured by an exhaust fan seven feet in diameter, 350 R. P. M. direct connected to a twenty-five H. P. electric motor. This fan has been installed some months and has given no trouble whatever, but is working smoothly.

The present outlook for this mine is very good. The average thickness of the coal was not as good as expected, but the coal is of excellent quality, and the indications are very favorable for an increase in thickness of coal with further development.

EQUIPMENT.

Tram Cars.

We now have in service 480 tram cars, distributed as follows: Mine No. 1, 400; Mine No. 3, 55; Mine No. 4, 25. These cars are nearly all in a good state of repair, and those in bad condition are being overhauled and rebuilt as rapidly as possible. During the last few months twenty-five sets of wheels and axles were purchased; these we are now building into new cars to replace

some of the old worn-out ones, and also to increase the number of cars now in service. About fifty more new cars can be used to advantage immediately, twenty-five in No. 4 Mine and twenty to twenty-five in No. 3, and provision has been made by the management to supply these cars.

Coal Washing Plant.

This plant is in need of some repairs to put it in first-class condition. A new sludge tank has been ordered, together with the necessary parts to repair stirrer shaft and elevators, and this work will be carried out immediately upon the arrival of these materials. A new retention bin for washed coal has been erected during the past few months; this bin has a capacity of 1,000 tons, and will add greatly to the efficiency of the plant when in service. This bin will give the coal an opportunity to drain more thoroughly before going to the ovens, and should result in less wear to the oven hearths, besides bettering the quality of the coke. An auxiliary scraper conveyor carries the coal from the end of the wet bin elevator out over the center of bin, discharging at convenient intervals through trap doors in conveyor bottom. It was expected to have this conveyor in operation ere this, but delay in the delivery of some of the parts has caused a corresponding delay in getting the conveyor in operation. The retention bin for dry coal is in bad condition and will have to be rebuilt at an early date. This should be replaced with a new bin of greater capacity to accommodate the storage of 800 to 1,000 tons of coal.

Power Plant.

The power plant as described in last biennial report has given excellent service since that time. The two independent and self-contained units have enabled us to operate with very little lost time on account of breakdowns in the power plant.

The service unit consisting of 24 x 48-inch Bates engine, and 320 K. W. Bullock generator, are in good condition excepting the valve gear on engine; this has become badly worn from continuous service, and arrangements have been made to have this replaced with a new valve gear at an early date. With this repair the unit will be in excellent condition, in fact "good as new," as the generator shows no appreciable wear or deterioration.

The emergency unit, consisting of 18 x 20-inch McEwen engine and two Bullock generators, stand in need of considerable repairs. The cylinder of engine is badly worn, and as this cylinder has already been rebored it is now too thin to stand another reboring, but will have to be replaced with new cylinder and cylinder head.

Telephone System.

We now have a complete and up-to-date telephone system in operation, connecting the various departments of the institution. The "central" station is located in the power house and immediate communication is had between any of the different departments.

MINOR IMPROVEMENTS AND REPAIRS.

The old 45-inch boiler used to operate fan at No. 1 Mine has been replaced with a twenty-five H. P. electric motor, and the efficiency of the fan has been largely increased thereby.

As noted elsewhere, the old "Snow" pump was overhauled and converted into an electrically driven pump. The cost of this conversion was only about \$300, as against \$1,100, the price of a new pump of equal capacity. This gives us a power pump of large capacity, available for service in any part of the mine.

Dwelling Houses and Prison.

Several of the dwelling houses have received small repairs during the year. Since the last biennial report extensive repairs have been made to the main prison building, but much remains to be done to put it in a proper state of repair. During the last year new floors have been laid, the building rebattened and painted, besides other general repairs. A new fence has been built about half-way round the prison yard, and the manway has been rebuilt. Concrete drains have been built around the prison building to take care of the storm water, with the necessary piping to carry the water outside the prison yard. An aerial tram has been put in for lowering coal directly from No. 10 cut out into the prison yard; this is much more convenient and economical than hauling the coal used by wagons. The hospital building has been extended and practically rebuilt. A small cottage has been

built near the dog yard for the use of the dog keeper, and a new kitchen and dining-room added to the guards' boarding house:

We have to report the loss by fire of two of our houses during the past year. These were the two houses located on the property purchased from Chandler, as shown in last biennial report.

RECOMMENDATIONS.

We would respectfully make the following recommendations for the improvement and betterment of general conditions:

1st. The purchase and installation of an electrically driven exhaust fan at Mine No. 3.

2d. The purchase of one Goodman 6-ton electric locomotive and the installation of electric haulage in Mine No. 3, at an early date. Our average haul in this mine is now 2,500 feet. This length of haul and the stiff grades encountered makes the work very hard on mules, besides keeping the output of the mines down considerably. It is believed that by the installation of electric haulage and a new tippie at the chute, that the present output of this mine can be redoubled in a short time.

3d. The erection of a retention bin for dry coal is urgently recommended. Our present bin is unsafe in many respects, besides being entirely too small to accommodate a reasonable surplus of coal.

4th. The addition of a bolt machine and larger drill press to the machine shop equipment is urgently recommended.

5th. The installation of a system of steam heating for the entire prison building. At present the prison is but indifferently heated by means of stoves. The installation of a system of steam heating would enable us to heat the whole prison thoroughly and uniformly, besides decreasing the risk of fire from stoves and flues.

6th. In view of the fact that from present indications the life of No. 1 mine is limited to the short time necessary to rob the mine of pillars and stumps, we would urgently recommend that the property to the west of Mine No. 1 be secured either by lease or purchased. The acquisition of this property will give us territory for four or five years' work without increased cost for equipment.

We would further recommend that the lower Pioneer vein and the Joiner vein on Frozen Head Mountain be prospected by driving entries to determine their value, and further that the Diamond drill outfit now the property of this institution, be rigged up and used to prospect for the lower coal measures believed to exist at no great depth.

This securing of new territory for Mine No. 1 by the lease above referred to, and the prospecting for new coal measures is of the utmost importance and should not be neglected, as any falling off in the amount of territory available for work would seriously cripple the present high standard of efficiency and value of the institution.

All of which is respectfully submitted for your approval.

H. B. GRAVES,
Assistant General Manager.

WM. B. CRAWFORD,
Superintendent.

W. H. Hartford, Chairman:

The above and foregoing report having been examined and found correct, the same is approved and submitted as my report.

Respectfully submitted,

W. T. MURRAY,
Commissioner in Charge.

REPORT OF PHYSICIAN

OF

BRUSHY MOUNTAIN BRANCH PRISON HOSPITAL.

PETROS, TENN., December 1, 1904.*To the Governor and Board of Prison Commissioners:*

In compliance with the general rules governing the management of the Tennessee State Penitentiary, I have the pleasure and privilege of submitting my biennial report of the control, management and conduct of the Brushy Mountain Branch Prison Hospital, situated at Petros, Morgan County, Tennessee. In doing so, I am constrained to invite your attention to the large variety of diseases, as shown by the accompanying tabulated statements, and herewith attached, that has affected the Prison; and when you consider the whole number of inmates, the number of inmates who are already diseased with organic and chronic troubles, and the general inseparable conditions incident to mining operations you will readily perceive that the percentage of deaths is comparatively small and insignificant, and that the treatment and result generally has been reasonably successful.

During the month of April, 1904, the Prison became infected with measles, which was introduced by a guard and trusty convict coming in contact with the disease on the outside of the Prison, and by determined efforts both of a sanitary nature and treatment of the disease, was successful in stamping the disease entirely out and restoring to robust health and condition every one who became infected, not losing by death a single patient.

Also, during the month of October, 1904, I have to report that the Prison became infected with cerebro spinal meningitis in its most virulent form, combating the most untiring effort that medical attention and ability could do to treat successfully, unfortunately adding largely to the death list for the year.

Since my appointment as Prison Physician, and through my earnest recommendations, extensive improvements have been made upon the Hospital, enlarging the building and giving greater space for ventilation, thereby adding to the improved sanitary and efficient condition of the same.

I wish to call your attention to the continued impure and insufficient water supply, materially affecting the health of the Prison, and express my thanks to the Board for their efforts to remedy the evil.

Vast improvements of a sanitary nature have been made in the yard and Prison building, but in my opinion there is room for a great deal more that seems absolutely necessary.

In conclusion I wish to acknowledge my appreciation of the courtesy and readiness with which the Board of Commissioners has invariably approved of my recommendations and suggestions for an improved sanitary condition of the Prison Hospital, and the better sanitary condition of the whole Prison.

Respectfully,

J. B. SMITH,
Prison Physician.

Percentage of deaths from accidents per annum.....	1 1-7

REPORT OF WARDEN

OF

BRUSHY MOUNTAIN BRANCH PRISON.

PETROS, TENN., December 1, 1904.

To the Honorable Board of Prison Commissioners:

GENTLEMEN—In compliance with the law I have the honor to submit for your consideration my report for the biennial term ending December 1, 1904. The reports of the various heads of departments, with accompanying tables, treat in detail on matter of interest in my department.

	<i>White.</i>	<i>Colored.</i>	<i>Total.</i>
Prisoners on hand December 1, 1902.....	145	617	762
Received	194	504	698
Recaptured	2	11	13
Total	341	1,132	1,473
Discharged	88	394	482
Died	7	46	53
Pardoned	24	9	33
Remanded		1	1
Transferred	55	86	141
Escaped	8	19	27
Prisoners on hand December 1, 1904.....	159	577	736
Total	341	1,132	1,473

As you are aware my jurisdiction as Warden does not cover the entire two years, as I was commissioned Warden of Brushy Mountain Prison on August 1, 1903.

Our discipline is good, as has been my custom in my twelve years' experience as Warden of the different Prisons of Tennessee, I have endeavored to be firm and impress upon the minds of each prisoner that any infraction upon prison rules meant just and effective punishment. I have taught them it was my

duty to protect them in the right and punish them in the wrong. The result of this teaching has been gratifying to me, as the punished list has been reduced and the amount of punishment quite so.

No man who is worthy to be Warden of a penitentiary can regard the duty of inflicting punishment—imperative as it may be—other than a very disagreeable duty.

The sanitary condition of the Prison is good, the food wholesome and splendid bathing facilities—shower baths with hot and cold water—and each miner is required to bathe each evening when he comes from the mines and put on a clean cell suit.

I want to enter a plea for the young man yielding to evil influences and serving his first sentence; many of them could be reclaimed if they were taught that self control which will enable him to resist evil influences; convince him that the world does not owe him a living because it is easier to steal than to earn it by the "sweat of his brow," and convince him that he who commits a crime is either a fool or a lunatic.

A serious defect exists in our law in its failure to provide for discharged convicts. As the law now exists nothing is given a discharged convict except a suit of clothes and transportation to the county from which he was sentenced; in consequence of this they enter at once on a career of crime—impelled as much by necessity as inclination. A hungry man becomes a desperate one; a desperate man is always ripe for crime.

Insane criminals are a source of great annoyance; the law should provide for their removal to the Insane Asylum.

As in 1897-1898 I want to advocate the parole system, one that I believe would be more conducive of good government than any law that could be enacted. If from no other reason they would not re-enter crime because of self interest. This law teaches self control, which is a preventive of crime.

In conclusion I desire to thank Commissioner and General Manager W. T. Murray for the many courtesies shown me and all those connected with the institution for their co-operation with me in working for the betterment of the State's interest.

Respectfully,

M. H. GAMMON, *Warden.*

REPORT OF CHAPLAIN AT MAIN PRISON.

To W. H. Hartford, M. M. Marshall and W. T. Murray, Prison Commissioners, Nashville, Tenn.:

GENTLEMEN—As Chaplain of the Main Prison I herewith transmit to you my biennial report for 1903 and 1904. Throughout this period the regular Sunday morning service at 11 A. M. has continued without an omission. The attendance on these services, although optional with the prisoner, has been large and the chapel has been filled with attentive listeners and devout worshippers. The gospel has been preached in as forcible and adapted manner as possible and has proven effective in frequent conversions and in the consistent Christian lives of many of those unfortunate wards of the State. The female prisoners, now fifty-seven in number, attend the chapel services in charge of Guard B. M. Rice. They enter the chapel first and are seated in the gallery. The white males next enter and occupy seats on the left from the pulpit. These are followed by the colored males, who are seated on the right. About one-third of all the inmates of the prison claim membership in some branch of the Christian Church. The Baptists and Methodists are in the ascendant, and all the churches in the State have representatives here. On application for church membership the prisoner is allowed to choose his own church and mode of baptism. Exercises in religious polemics and efforts at proselytism are not allowed by the Chaplain, but every good word and work consistent with the nature, design and rules of this institution are encouraged. About thirty persons have been baptized and fifty have taken membership in the churches during the past two years. Many have been converted who have not joined the church. The Chaplain does not emphasize the importance of church membership here as he does genuine repentance and faith, and correct and upright living. The sacrament of the Lord's Supper is administered, to all who choose to take it, once each quarter.

Many ministers of the gospel from the city and elsewhere have encouraged us by their visits and ministrations, both in the regular chapel services and in the Sunday-school. Among them I mention the following: Revs. G. P. Jackson, J. B. Erwin, D.D., Granville Lipscomb, James Thomas, S. M. and W. D. Cherry, J. C. Myers, Dr. Anderson, of the First Presbyterian Church, and Dr. Shelton, of the Russell Street C. P. Church; Mother Wheaton, of Prison Evangelistic fame, spent two days at the Prison visiting and praying with the sick at the hospital and preaching once in the chapel.

Father Bahmer and Sisters of Charity have ministered to those of the Catholic faith.

Among those visitors who have cheered the inmates of the prison with their sweet songs are Mrs. McClure, Miss Pearl Thompson, choir of the Second Presbyterian Church and the Jubilee Singers. The Sunday-school held in the prison chapel in the Sunday afternoons is a marvelous success and a potent factor for good. Mr. Arthur S. Ransom, a young man of great zeal and energy, is the superintendent, and he has with him a corps of fifty-two able, consecrated and high-toned teachers of his own selection. Prof. D. Moore Andrews instructs in vocal music. Among the Sunday-school teachers are some godly women who have been associated with the school for many years. Mrs. Dr. Harwell, Mrs. M. E. Foster, Mrs. U. S. Pate, Mrs. Mattie E. Hunter, Mrs. Horace Frierson, Mrs. Cole, Mrs. Rust, Mrs. Stratton, Miss Lydie Searles and others have given much instruction in the Word of God. Their coming and counsel are eagerly welcomed and heeded by their pupils. Eternity alone can reveal the amount of good that all the teachers are doing in their weekly visits to this prison Sunday-school. The Sunday-school literature has been gratuitously furnished by the Baptist Board of Publication, this city. The best religious papers published are furnished by the teachers and friends on the outside. The Chaplain attends the Sunday-school regularly and does all he can by his influence and help to push forward the good work. When the teachers were excluded during the few weeks of the small-pox quarantine last winter, he, without any assistance, continued the school without a break.

The female prisoners have a separate Sunday-school in the

Women's Building, conducted by the Matron, Mrs. Jennie Campbell, and taught by Mrs. Lizzie Traynor and Miss Addie Anderson, of this city. This school is making rapid progress in the study of the Scriptures and in vocal music.

The Library needs a much larger room with more shelves and accommodations. A common cell being now used. It is mainly supplied by philanthropic and benevolent persons. At this time there are books:

Number of inmates availing themselves of library privilege, 561. Of the 350 Bibles on hand, about one-half the number are of too small print to be used by a number of prisoners. The United States histories on hand are of old editions and new ones are needed. Also first readers, spelling books, geographies, high school dictionaries and a limited number of large print Bibles. C. S. Sprague, a prisoner, is the librarian. Many of the prisoners have books of their own in their cells.

The Chaplain has been a frequent visitor at the hospital, where, through the courtesy and kindness of the physician in charge, Dr. Frank Head, he has read the Scriptures and prayed

with the sick and dying. In this he has been aided by Mrs. Jennie Campbell, the Matron, Mrs. Dr. Harwell, Mrs. Mattie E. Hunter, Miss Thompson and others.

The Chaplain appreciates the presence and aid of students from Fisk and Meharry Universities, whose work, as teachers, has been efficient and conducted every way praiseworthy.

The Chaplain takes pleasure in noting the work and workers of the Christian Endeavor Society. This important arm of our prison work is lead by that enthusiastic and indomitable Christian lady, Mrs. G. W. Williams. She is ably assisted in the work by Mr. John T. Benson and his saintly wife, Mrs. Eva G. Benson, and Mrs. E. H. Welburn. This society numbers 400 members and includes in its membership males and females, white and colored. Their meetings have continued, without omission, on every first Sunday in the month, and have been productive of good results.

To you, the Honorable Board of Prison Commissioners, the gentlemanly Warden, with all the officials, guards, clerks and contractors, the Chaplain extends unfeigned gratitude for co-operation in the discharge of his delicate and responsible duties.

Respectfully submitted,

JOHN O. BLANTON,
Chaplain Main Prison.

REPORT OF PHYSICIAN AT MAIN PRISON.

NASHVILLE, TENN., December 1, 1904.

Honorable Board of Prison Commissioners, Nashville, Tenn.:

GENTLEMEN—I have the honor to submit herewith my biennial report of this office, commencing December 1, 1902, to December 1, 1904.

It will be unnecessary for me to make a detailed report of each day, as my daily and monthly reports are before you in the office. The recapitulation submitted will give you exact information as to the sanitary condition and general health of the Prison.

The institution has been entirely free from epidemics for the past two years, with the exception of measles. During the months of February and March, 1904, there were about sixty cases, all recovering.

The death rate is not as large as previous years; due possibly to a better class of prisoners being received. There are a great many prisoners sent from Brushy Mountain after they have become useless as miners either from disease or injury. From the number of deaths here there were twenty-three that came from Brushy Mountain affected with anthracosis or coal miners' disease, and tuberculosis. These men all died in a few weeks after receiving them.

There should be some provision made so that the Board of Prison Commissioners or Warden could transfer all insane prisoners to the asylum, either temporarily or permanently as the case may be. We are not properly prepared to care for them here, being forced to confine them in the cell houses near the other prisoners.

FEMALE DEPARTMENT.

The Matron, Mrs. Jennie Campbell, deserves a great deal of credit for her judgment in the management of this department. The building is absolutely clean at all times. The food and clothing are of the best. I therefore give Mrs. Campbell entire credit for the perfect health of this department.

Our Chaplain, Rev. J. O. Blanton, makes daily visits to the hospital, administering to the spiritual wants of the sickly prisoner.

It gives me great pleasure to say that the administration of my department has been greatly facilitated by the assistance and encouragement received from your Board and the Warden.

Very respectfully,

FRANK P. HEAD.

WARDEN'S REPORT, STATE PENITENTIARY, FROM DECEMBER 1, 1902, TO DECEMBER 1, 1904.

To the Honorable Board of Prison Commissioners, W. H. Hartford, M. M. Marshall and W. T. Murray:

Pursuant to the statutes bearing on the State Penitentiary, I herewith submit for your consideration the biennial report of the official status and management pertaining to the Warden's department of this institution, covering a period of two years, beginning December 1, 1902, and closing December 1, 1904.

The year just closed has been one of advancement as well as the most profitable. I feel that our moral advancement should be looked to with even more pride than our splendid financial showing. During the year of 1902 the graded system was introduced into this prison. It has grown and improved until words are inadequate to express the benefits derived from this mode of prison discipline. It is absolutely the life of the management. It is a system of management and discipline that largely dispenses with corporal punishment and puts the convict on a line of moral teaching and training which will present to the untaught and untrained mind not only the majesty of the law but the principles of right doing as well, keeping always before him the cardinal fact that order and quietude must be maintained.

To illustrate the good effect of the graded system on the conduct of prisoners: On December 1, 1904, there were 944 inmates at Main Prison; of this number 674 were in the upper grade, 258 were in the middle grade and only twelve in the lower grade.

I have classified the cell buildings into three departments for discipline and sanitary reasons and have met with splendid results. First, I have placed all white boys under twenty-one years of age in Range No. 7. No other convicts are permitted on this range at any time. The result is that they do not, except in a limited way, come in contact with hardened criminals. Range No. 1 is for the afflicted. This prevents them from com-

municating their disease to others. Ranges Nos. 4 and 6 are largely filled with the most desperate characters in the Prison.

The colored wing is classified the same as the white except the age limit for boys is twenty years. The reason for the difference is that there are so many more negro boys than white that I cannot well arrange room. The sanitary results from this arrangement have been wonderful, which the physician's report will verify.

The prisoners are not overtasked. To prove this you will only have to refer to the books in the office, which will show balance to their credit derived from working overtask to amount to, on December 1, 1904, \$3,332.66. On December 1, 1902, this amount was \$2,335.68. A net gain to their credit of \$976.98. Each man has his account and out of it he draws on the commissary through this office to pay for various items of luxuries. This is an inducement for the prisoner to maintain good conduct and improve his labor. The commissary is a very necessary adjunct to the prison.

The woman's department is in excellent condition. The building is kept spotlessly clean, under the direction of the Matron, and the inmates are employed in the hosiery mill at labor that is easy for them to perform but profitable to the State, and in the end to themselves.

I wish to extend to your Honorable Board my thanks for the many courtesies and considerations shown me, also to the entire guard force, who have been uniformly courteous and agreeable.

Dr. Head, the Prison Physician, whose official duties come in close touch to mine, has always been very considerate and agreeable. The improved condition in the health of the prisoners, as shown by his report, speaks for his good judgment and ability.

The food, prepared by our efficient steward, Capt. Sol Spencer, who has had some twenty-three years' experience, and of whom no one has ever found fault, is both wholesome and well prepared.

The cold storage plant is a very valuable improvement. In this our vegetables and meats are kept pure and fresh. The following will show an average menu, which of course varies with the seasons:

MONDAY.

Breakfast—Stewed beef, Irish potatoes, onions, corn bread and coffee.

Dinner—Bacon, cabbage with vinegar and corn bread.

Supper—Molasses, prunes, corn bread and coffee.

TUESDAY.

Breakfast—Beef hash with onions, Irish potatoes, corn bread and coffee.

Dinner—Bacon, peas, green onions and corn bread.

Supper—Molasses, stewed apples, corn bread and coffee.

WEDNESDAY.

Breakfast—Fried bacon, fried hominy, raised gravy, corn bread and coffee.

Dinner—Bacon, new Irish potatoes, sliced tomatoes, cucumbers, onions with black pepper and vinegar, and corn bread.

Supper—Molasses, stewed rice, bologna sausage, light bread, buttermilk.

THURSDAY.

Breakfast—Beef hash, onions, Irish potatoes, corn bread and coffee.

Dinner—Bacon, soup beans, stewed corn, onions and corn bread.

Supper—Molasses, evaporated peaches, corn bread and coffee.

FRIDAY.

Breakfast—Beef, sweet milk, onions, Irish potatoes, corn bread and coffee.

Dinner—Stewed beef, baked sweet potatoes, stewed tomatoes and corn bread.

Supper—Molasses, hominy, light bread and buttermilk.

SATURDAY.

Breakfast—Beef hash with onions, Irish potatoes, corn bread and coffee.

Dinner—Bacon, kraut, baked Irish potatoes and corn bread.

Supper—Molasses, green corn, corn bread and coffee.

SUNDAY.

Breakfast—Fried bacon, fried kraut, evaporated apples, raised gravy, corn bread and coffee.

Dinner—Bacon, peas, radishes, corn bread and buttermilk.

No supper on Sundays.

HOLIDAY DINNERS.

Barbecued mutton, barbecued pork, sweet potatoes, light bread, apple butter, pickles, apple pies, cake, coffee and sugar, buttermilk, bananas, apples, oranges, candy and corn bread.

Our congenial Chaplain, Rev. J. O. Blanton, is in constant attendance at the prison and has been of great benefit. He is pleasant and always ready to administer to the wants of the inmates. We have preaching at eleven o'clock every Sunday and Sunday-school in the afternoon, conducted by a number of charitable people of the city, of which Rev. Arthur Ransom is Superintendent.

I cannot say too much for my assistant, Mr. W. E. Gillenwaters, who acts in the capacity of principal keeper. I feel that his services have simply been indispensable. His fine sense of judgment, tempered with mercy, makes him eminently capacitated for the position he holds.

Our prison is filled with all kinds of men. They are by nature as varied as the crimes they have committed. It is easy to compel the surrender of a refractory prisoner by the infliction of sufficient punishment. It is easy to make a man fear to disobey, but it is not easy to change his point of view so that he will choose to obey, but it can be done, for it has and is being done from time to time, under my own observation. This is done by process of teaching, gathered from our graded system of rules. Not mainly to make obedient prisoners, but rather to encourage the fallen and erring in his passage back to the ranks of society, reclaimed and reformed.

The following tables will show the general make-up of the prison population:

The number of convicts in confinement at this prison and at Brushy Mountain December 1, 1902, was 1,685. Number received from December 1, 1902, to December 1, 1904, was 1,306. Recaptured from December 1, 1902, to December 1, 1904, was

twenty-five. From December 1, 1902, to December 1, 1904, there were discharged on expiration of sentence, 1,063; remanded from Brushy Mountain, one; total discharged, 1,064; released on pardons, 114; death, 123; escapes, thirty-five. In confinement December 1, 1904, 1,680.

Of the 1,680 convicts now on hand, 523 are white males, three white females, making a total of 526 whites and 1,100 colored males and fifty-four colored females. I have in my charge all the females, fifty-seven in number.

The number of white males in confinement at Brushy Mountain Branch Prison is 159, colored males, 577, making a total of 736.

On December 1, 1904, there were confined at the Main Prison life prisoners as follows: Forty-one white males, two white females, sixty-four colored males, two colored females, making a total of 109.

Of the 944 prisoners confined at the Main Prison on December 1, 1904, 644, or sixty-eight and three-tenths per cent used spirituous liquors in some form; 300, or thirty-one and seven-tenths per cent, were abstainers; 767, or eighty-one and twenty-nine one-hundredths per cent, used tobacco; 177, or eighteen and seventy-one one-hundredths per cent, do not use tobacco; 859, or ninety-one per cent, were profane; eighty-five, or nine per cent, were not.

Of the 1,680 prisoners at the Main Prison and Branch Prison, 1,154, or sixty-eight and three-fifths per cent are colored; 526, or thirty-one and two-fifths per cent, are white; 214, or sixteen and three-tenths per cent, profess some form of religion; 1,092, or eighty-three and seven-tenths per cent, claim no religion.

During the last two years we have had only eight escapes, none of which were from within the Prison walls. Six of these were trusties; one escaped from the farm and one while in transit to the mines. Of these eight five have been recaptured. In addition to these we have recaptured seven who had made their escape prior to December 1, 1902, showing a net gain of four. This is by far the best showing along this line in the history of the Prison.

Table No. 1 gives the number in confinement December 1, 1904; the number received on sentences and by recapture from

December 1, 1902, to December 1, 1904; also discharges by expiration of sentences, pardons, deaths and escapes; it also shows the handling of convicts by counties.

Table No. 2 shows United States prisoners by State received, recaptured, discharged, pardoned, died and escaped.

Table No. 3 shows the number sentenced for each crime during the last two years.

Table No. 4 shows previous occupation or trade of prisoners, if any, received during the last two years.

Table No. 5 shows the educational status of all prisoners received during the last two years.

Table No. 6 shows religious beliefs.

Table No. 7 shows nationality of each convict.

Table No. 8 shows number of years for which each prisoner was sentenced.

Table No. 9 shows respective ages of prisoners.

Table No. 10 shows the number who are serving second, third, fourth and fifth sentences.

Table No. 11 gives general recapitulation of prisoners.

The above includes the United States, as well as the State prisoners, but for the sake of convenience in references I have prepared a separate tabulated statement (see No. 2) for the United States prisoners, showing the number discharged on expiration of sentence, number pardoned, died and escaped, also number received from the several States.

RECOMMENDATIONS.

I most heartily concur in the recommendation of His Excellency, Governor Frazier, with reference to the Warden being clothed with authority to pay to each discharged convict who has no money a nominal sum sufficient to feed and lodge him until he reaches his home and friends. I think it is worse than a crime to discharge an unfortunate with only an order for a railroad ticket to his home. It is often twenty-four hours before he can get a train out of the city, as we do not hold transportation over all the roads running into this city. Can you imagine what he is to do for food and a place to sleep during the additional eight or ten hours that he may be on the road to his home? More often these men are old, or in delicate health, as all the strong

men have earned money and have it to their credit in the office. It looks like a case of steal or starve, with the chances that a majority will embrace the former. I feel hopeful that the law will be regulated to cure this evil.

2d. I would recommend that the windows to the cell buildings be so arranged that they can all be opened for a short while each day, so that all impure air may escape and the building be filled with fresh, pure air. We have the air-chamber system, but this would add a much needed improvement.

3d. Our dining hall should be made larger, so that it will accommodate all the men at a time. Many evil communications occur between the prisoners on account of what we term the "second line." It is almost impossible to keep up with a man during this time, to say nothing of the valuable time lost.

I offer these few recommendations because I think they would be for the betterment of the institution.

Hoping that our future relations may be as pleasant as the past, I beg to remain

Most respectfully,

LUKE McMENAWAY,
Warden.
